

CHAPTER 11:

Multilayer Perceptrons

Neural Networks

- Networks of processing units (neurons) with connections (synapses) between them
- Large number of neurons: 10^{10}
- Large connectivity: 10^5
- Parallel processing
- Distributed computation/memory
- Robust to noise, failures

Understanding the Brain

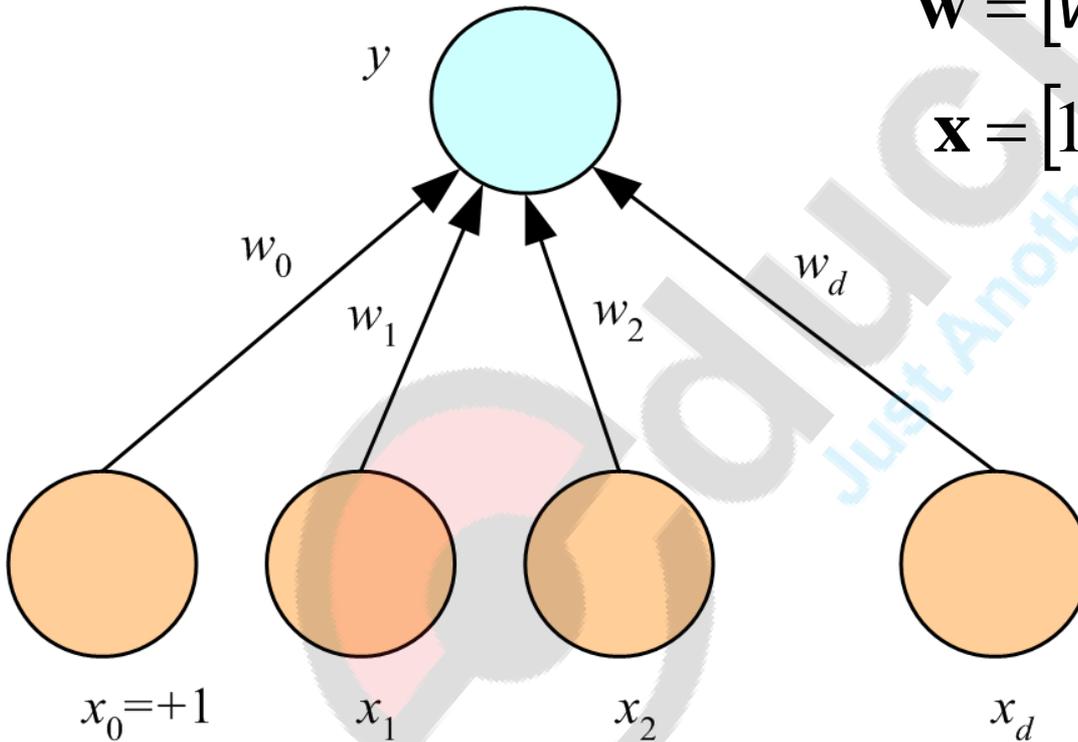

- Levels of analysis (Marr, 1982)
 1. Computational theory
 2. Representation and algorithm
 3. Hardware implementation
- Reverse engineering: From hardware to theory
- Parallel processing: SIMD vs MIMD
 - Neural net: SIMD with modifiable local memory
 - Learning: Update by training/experience

Perceptron

$$y = \sum_{j=1}^d w_j x_j + w_0 = \mathbf{w}^T \mathbf{x}$$

$$\mathbf{w} = [w_0, w_1, \dots, w_d]^T$$

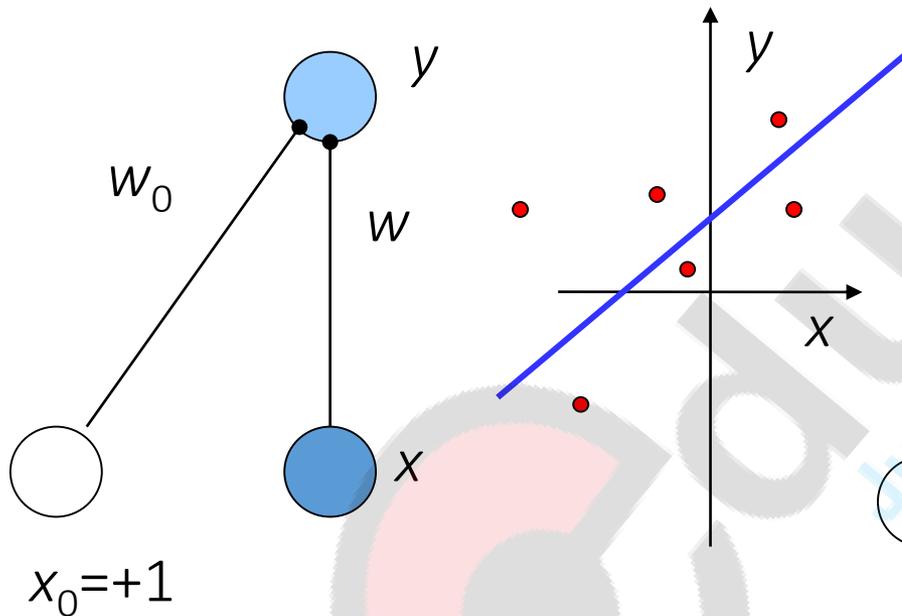

$$\mathbf{x} = [1, x_1, \dots, x_d]^T$$

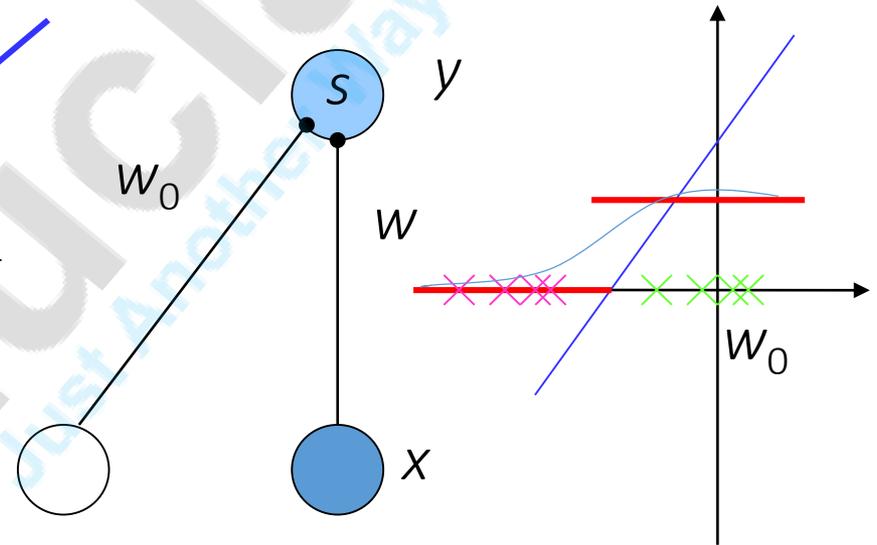

(Rosenblatt, 1962)

What a Perceptron Does

- Regression: $y=wx+w_0$

- Classification: $y=1(wx+w_0>0)$

$$y = \text{sigmoid}(o) = \frac{1}{1 + \exp[-\mathbf{w}^T \mathbf{x}]}$$

Regression:

K Outputs

$$y_i = \sum_{j=1}^d w_{ij} x_j + w_{i0} = \mathbf{w}_i^T \mathbf{x}$$

$$\mathbf{y} = \mathbf{W} \mathbf{x}$$

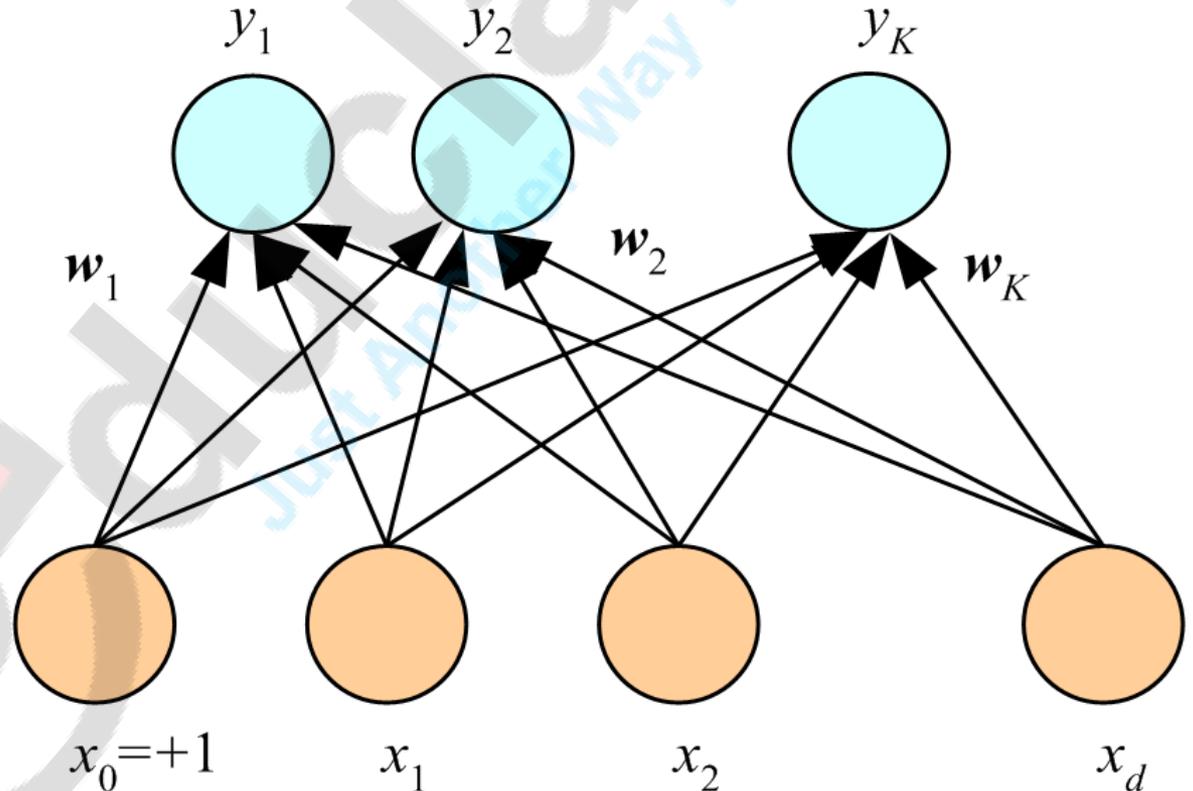

Classification:

$$o_i = \mathbf{w}_i^T \mathbf{x}$$

$$y_i = \frac{\exp o_i}{\sum_k \exp o_k}$$

choose C_i

if $y_i = \max_k y_k$

Training

- Online (instances seen one by one) vs batch (whole sample) learning:
 - No need to store the whole sample
 - Problem may change in time
 - Wear and degradation in system components
- Stochastic gradient-descent: Update after a single pattern
- Generic update rule (LMS rule) $\Delta w_j = \eta (t_i^t - y_i^t) x_j^t$

Update = LearningFactor * (DesiredOutput - ActualOutput) * Input

Training a Perceptron: Regression

- Regression (Linear output):

$$E^t(\mathbf{w} | \mathbf{x}^t, r^t) = \frac{1}{2} (r^t - y^t)^2 = \frac{1}{2} [r^t - (\mathbf{w}^T \mathbf{x}^t)]^2$$

$$\Delta w_j^t = \eta (r^t - y^t) x_j^t$$

Classification

- Single sigmoid output

$$y^t = \text{sigmoid}(\mathbf{w}^T \mathbf{x}^t)$$

$$E^t(\mathbf{w} | \mathbf{x}^t, \mathbf{r}^t) = -r^t \log y^t - (1-r^t) \log(1-y^t)$$

$$\Delta w_j^t = \eta(r^t - y^t) x_j^t$$

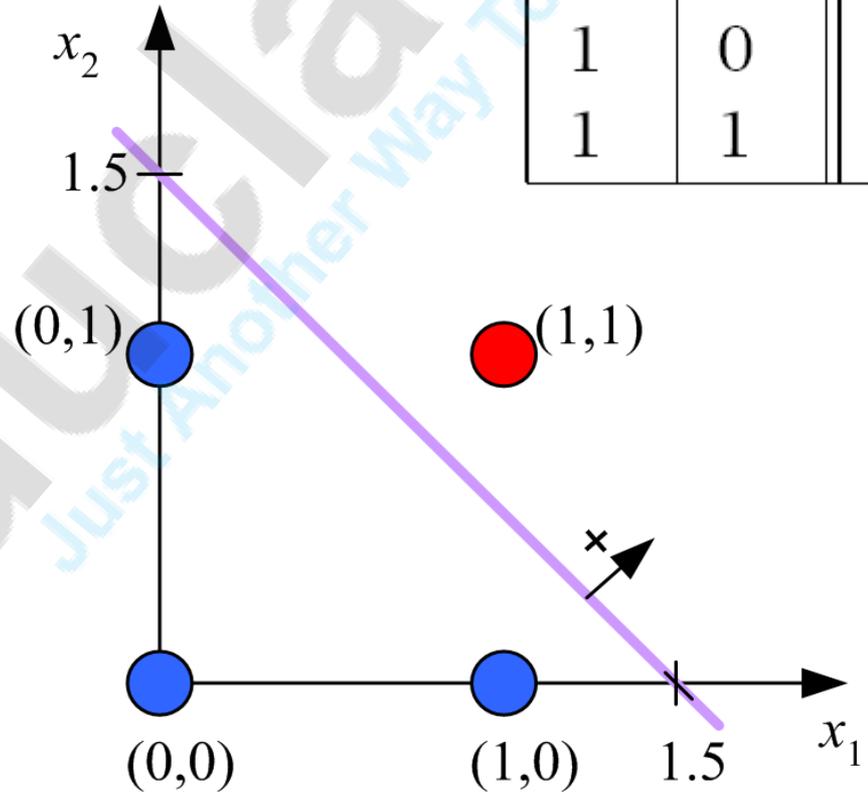

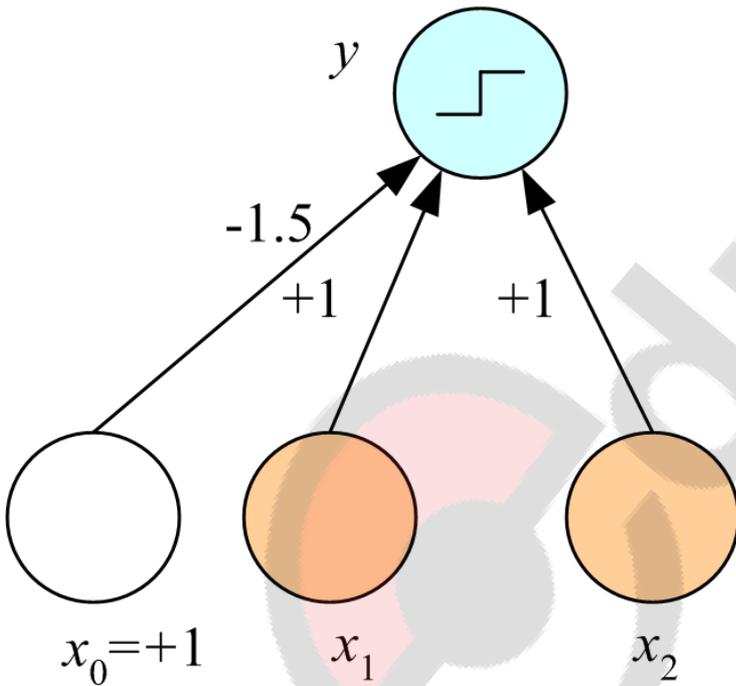

- $K > 2$ softmax outputs

$$y^t = \frac{\exp \mathbf{w}_i^T \mathbf{x}^t}{\sum_k \exp \mathbf{w}_k^T \mathbf{x}^t}$$

$$\Delta w_{ij}^t = \eta(r_i^t - y_i^t) x_j^t$$

$$E^t(\{\mathbf{w}_i\}_i | \mathbf{x}^t, \mathbf{r}^t) = -\sum_i r_i^t \log y_i^t$$

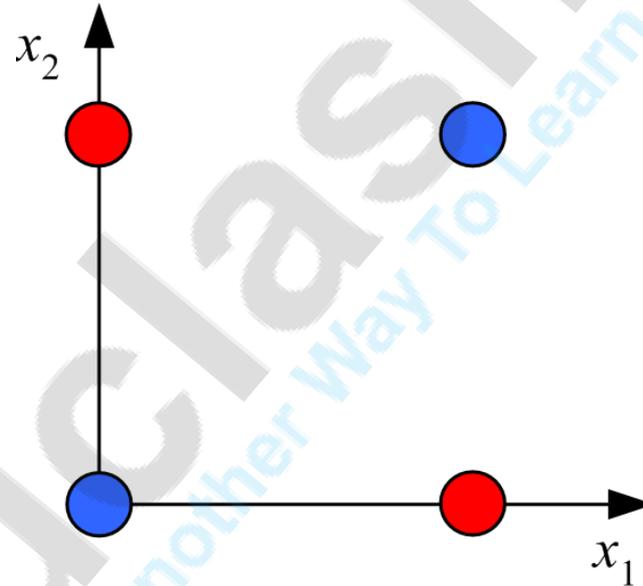

Learning Boolean AND

x_1	x_2	r
0	0	0
0	1	0
1	0	0
1	1	1

XOR

x_1	x_2	r
0	0	0
0	1	1
1	0	1
1	1	0

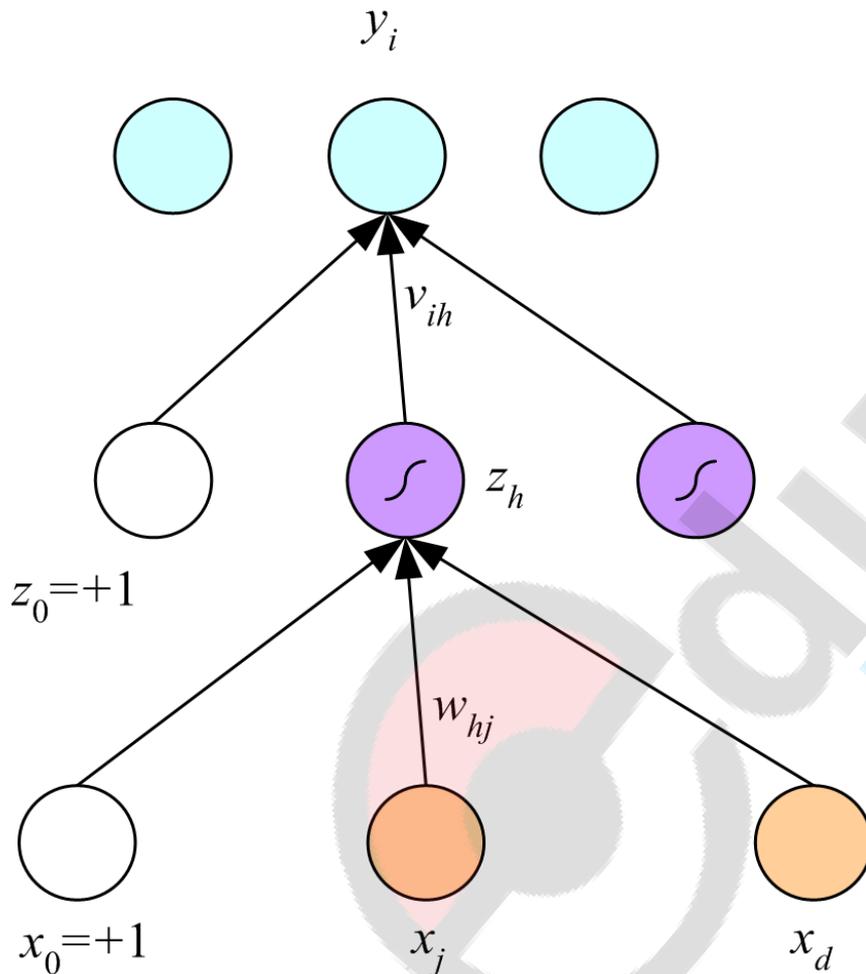

- No w_0, w_1, w_2 satisfy:

$$\begin{aligned}w_0 &\leq 0 \\w_2 + w_0 &> 0 \\w_1 + w_0 &> 0 \\w_1 + w_2 + w_0 &\leq 0\end{aligned}$$

(Minsky and Papert, 1969)

Multilayer Perceptrons

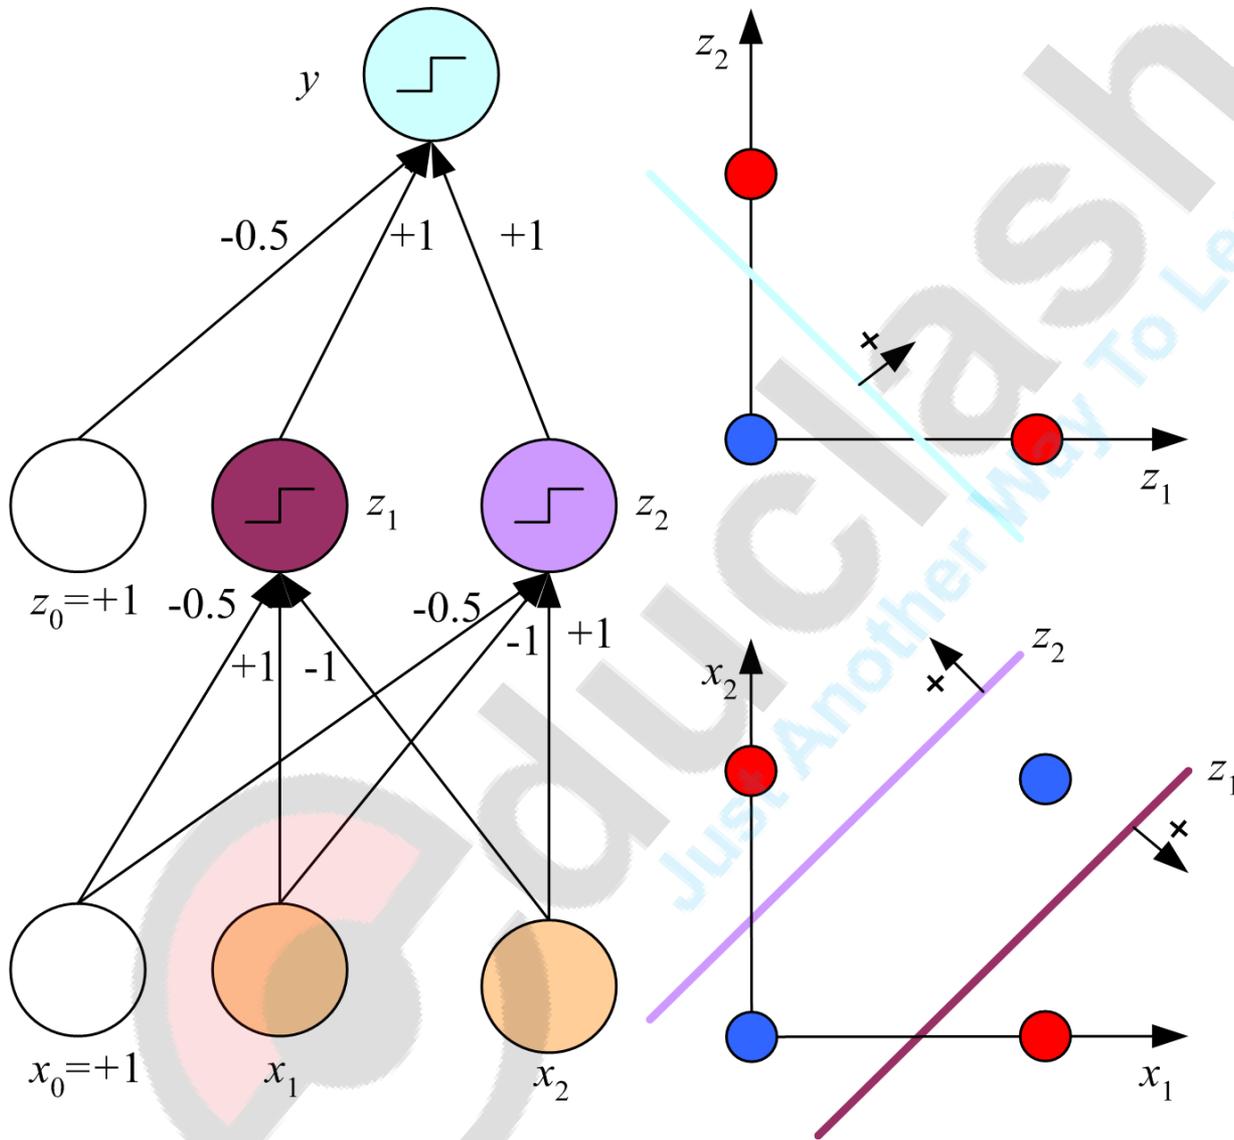

$$y_i = \mathbf{v}_i^T \mathbf{z} = \sum_{h=1}^H v_{ih} z_h + v_{i0}$$

$$z_h = \text{sigmoid}(\mathbf{w}_h^T \mathbf{x})$$

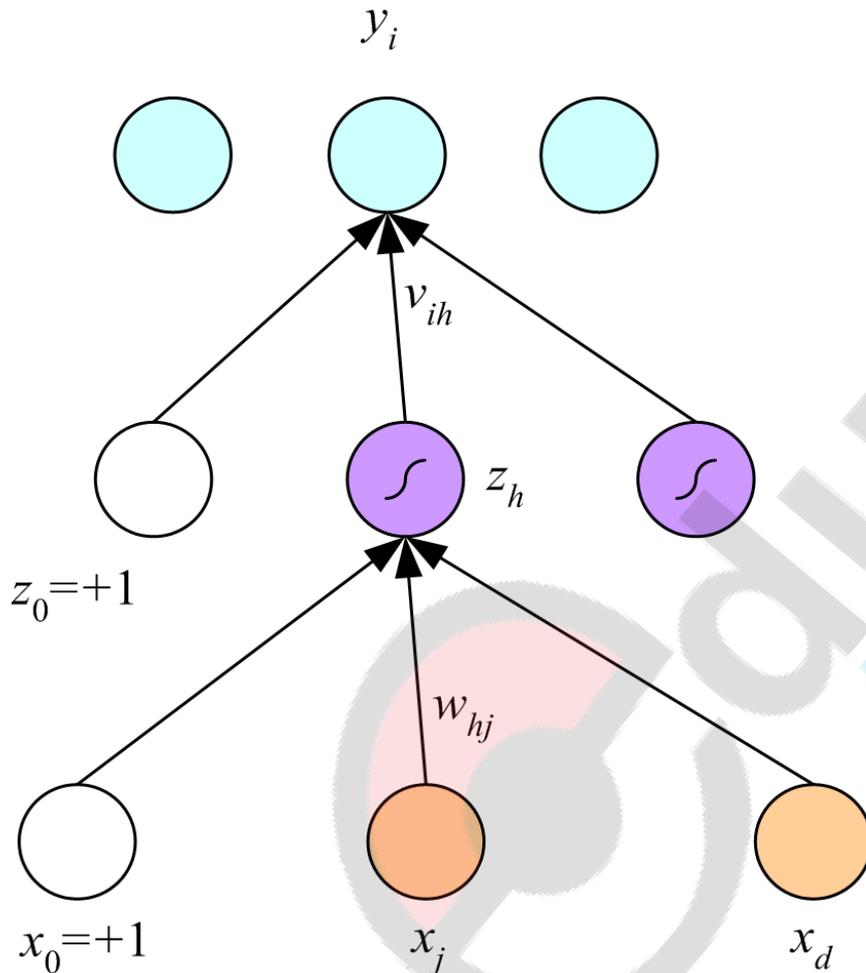

$$= \frac{1}{1 + \exp\left[-\left(\sum_{j=1}^d w_{hj} x_j + w_{h0}\right)\right]}$$

(Rumelhart et al., 1986)

$$x_1 \text{ XOR } x_2 = (x_1 \text{ AND } \sim x_2) \text{ OR } (\sim x_1 \text{ AND } x_2)$$

Backpropagation

$$y_i = \mathbf{v}_i^T \mathbf{z} = \sum_{h=1}^H v_{ih} z_h + v_{i0}$$

$$z_h = \text{sigmoid}(\mathbf{w}_h^T \mathbf{x})$$

$$= \frac{1}{1 + \exp\left[-\left(\sum_{j=1}^d w_{hj} x_j + w_{h0}\right)\right]}$$

$$\frac{\partial E}{\partial w_{hj}} = \frac{\partial E}{\partial y_i} \frac{\partial y_i}{\partial z_h} \frac{\partial z_h}{\partial w_{hj}}$$

Regression

$$y^t = \sum_{h=1}^H v_h z_h^t + v_0$$

Forward

$$z_h = \text{sigmoid}(\mathbf{w}_h^T \mathbf{x})$$

\mathbf{x}

$$E(\mathbf{W}, \mathbf{v} | \mathcal{X}) = \frac{1}{2} \sum_t (r^t - y^t)^2$$

$$\Delta v_h = \sum_t (r^t - y^t) z_h^t$$

Backward

$$\begin{aligned} \Delta w_{hj} &= -\eta \frac{\partial E}{\partial w_{hj}} \\ &= -\eta \sum_t \frac{\partial E}{\partial y^t} \frac{\partial y^t}{\partial z_h^t} \frac{\partial z_h^t}{\partial w_{hj}} \\ &= -\eta \sum_t -(r^t - y^t) v_h z_h^t (1 - z_h^t) x_j^t \\ &= \eta \sum_t (r^t - y^t) v_h z_h^t (1 - z_h^t) x_j^t \end{aligned}$$

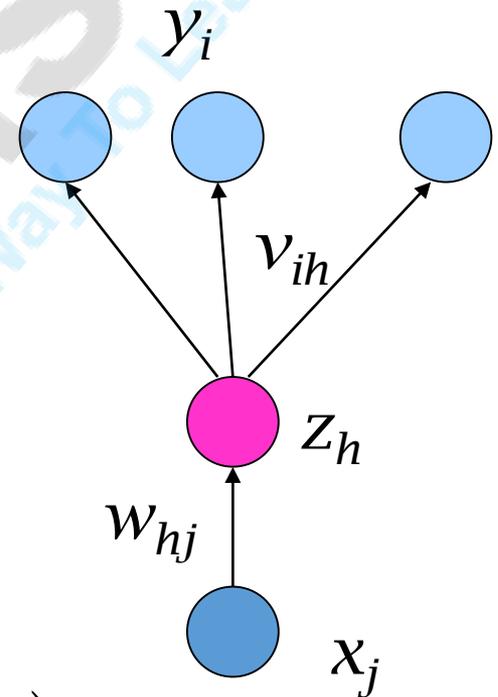

Regression with Multiple Outputs

$$E(\mathbf{W}, \mathbf{V} | \mathcal{X}) = \frac{1}{2} \sum_t \sum_i (r_i^t - y_i^t)^2$$

$$y_i^t = \sum_{h=1}^H v_{ih} z_h^t + v_{i0}$$

$$\Delta v_{ih} = \eta \sum_t (r_i^t - y_i^t) z_h^t$$

$$\Delta w_{hj} = \eta \sum_t \left[\sum_i (r_i^t - y_i^t) v_{ih} \right] z_h^t (1 - z_h^t) x_j^t$$

Initialize all v_{ih} and w_{hj} to $\text{rand}(-0.01, 0.01)$

Repeat

For all $(\mathbf{x}^t, r^t) \in \mathcal{X}$ in random order

For $h = 1, \dots, H$

$$z_h \leftarrow \text{sigmoid}(\mathbf{w}_h^T \mathbf{x}^t)$$

For $i = 1, \dots, K$

$$y_i = \mathbf{v}_i^T \mathbf{z}$$

For $i = 1, \dots, K$

$$\Delta \mathbf{v}_i = \eta(r_i^t - y_i^t) \mathbf{z}$$

For $h = 1, \dots, H$

$$\Delta \mathbf{w}_h = \eta\left(\sum_i (r_i^t - y_i^t) v_{ih}\right) z_h (1 - z_h) \mathbf{x}^t$$

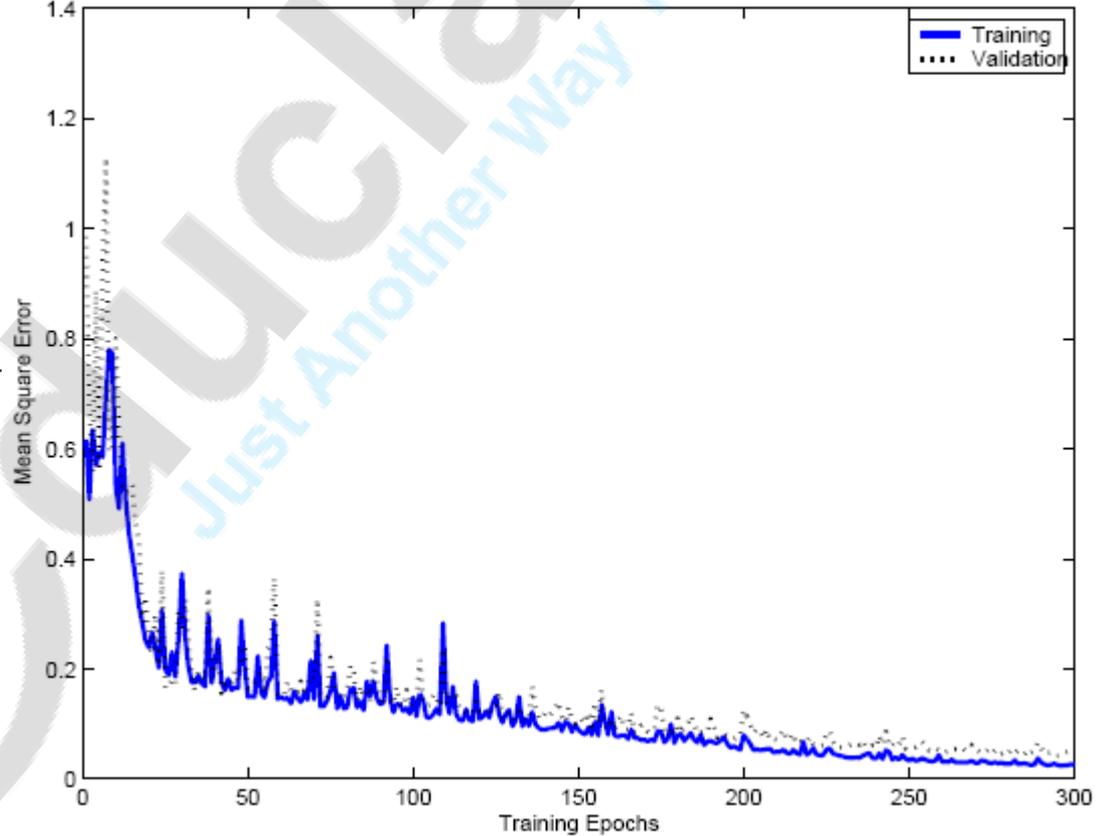

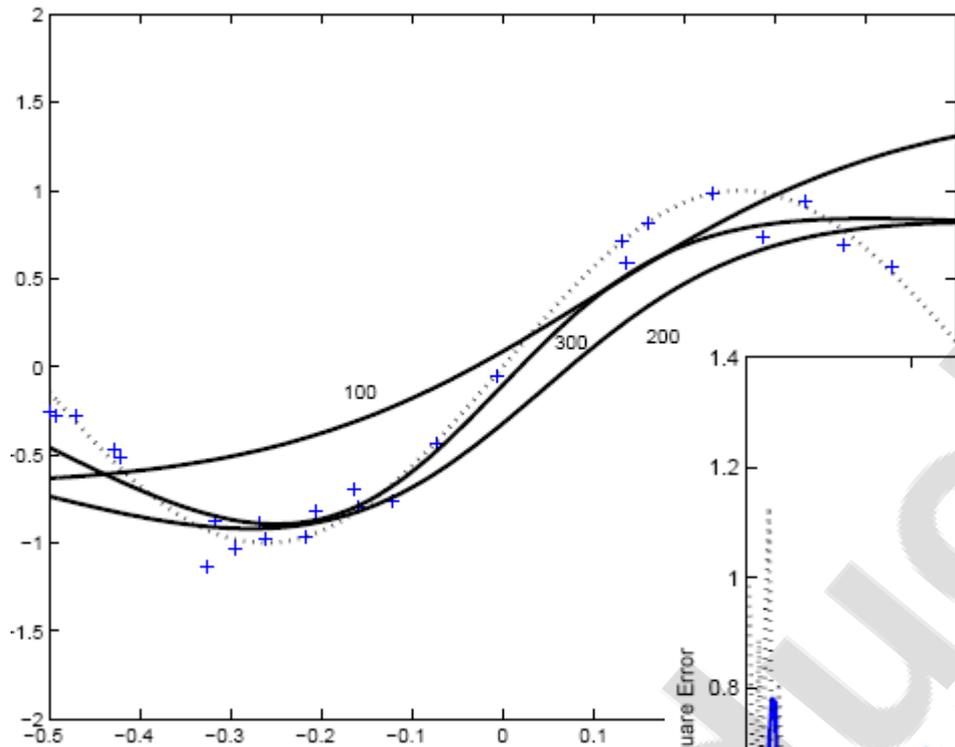

For $i = 1, \dots, K$

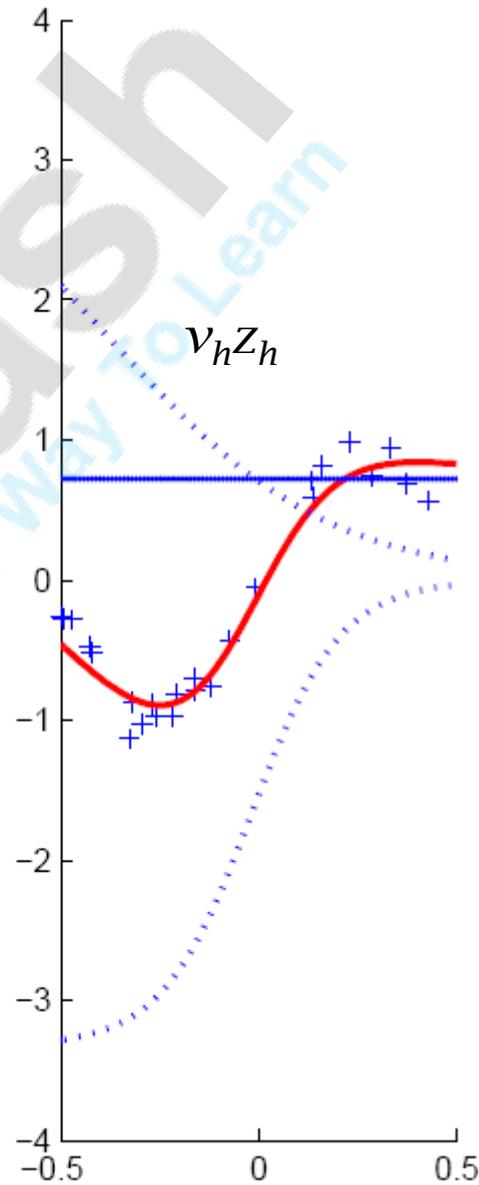

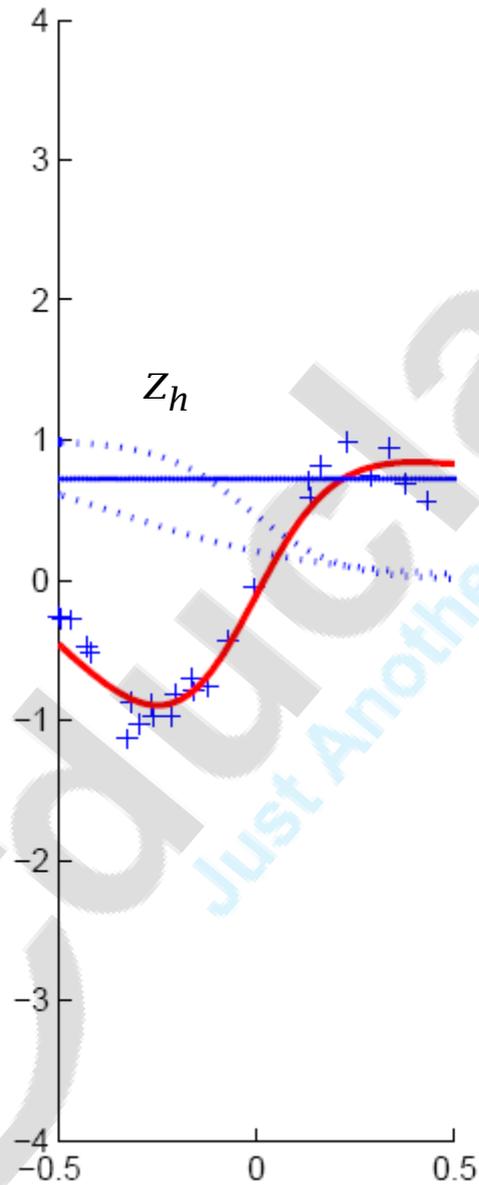

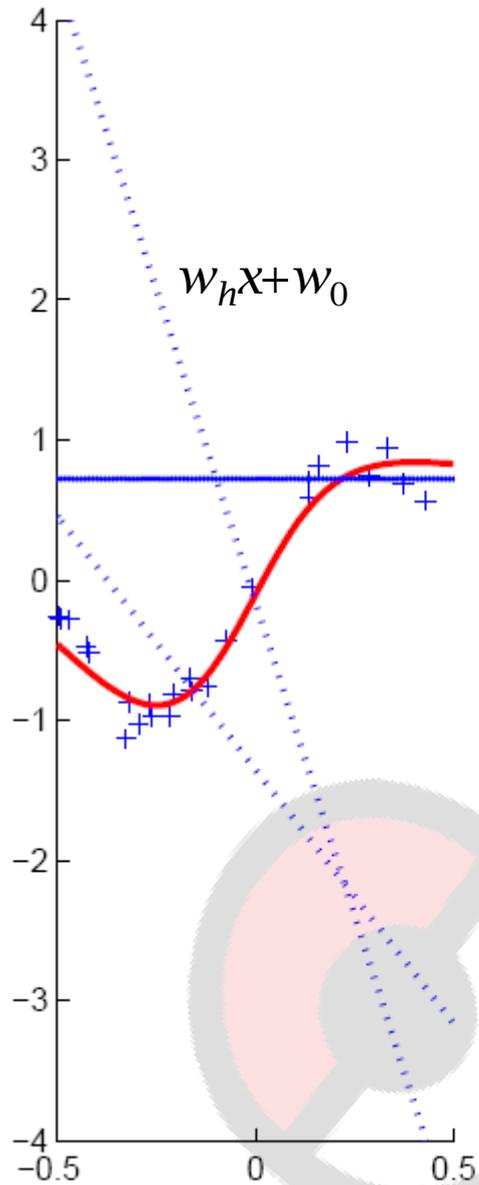

$$\mathbf{v}_i \leftarrow \mathbf{v}_i + \Delta \mathbf{v}_i$$

For $h = 1, \dots, H$

$$\mathbf{w}_h \leftarrow \mathbf{w}_h + \Delta \mathbf{w}_h$$

Until convergence

Two-Class Discrimination

- One sigmoid output y^t for $P(C_1 | \mathbf{x}^t)$ and $P(C_2 | \mathbf{x}^t) \equiv 1 - y^t$

$$y^t = \text{sigmoid} \left(\sum_{h=1}^H v_h z_h^t + v_0 \right)$$

$$E(\mathbf{W}, \mathbf{v} | \mathcal{X}) = - \sum_t r^t \log y^t + (1 - r^t) \log (1 - y^t)$$

$$\Delta v_h = \eta \sum_t (r^t - y^t) z_h^t$$

$$\Delta w_{hj} = \eta \sum_t (r^t - y^t) v_h z_h^t (1 - z_h^t) x_j^t$$

$K > 2$ Classes

$$o_i^t = \sum_{h=1}^H v_{ih} z_h^t + v_{i0} \quad y_i^t = \frac{\exp o_i^t}{\sum_k \exp o_k^t} \equiv P(C_i | \mathbf{x}^t)$$

$$E(\mathbf{W}, \mathbf{v} | \mathcal{X}) = - \sum_t \sum_i r_i^t \log y_i^t$$

$$\Delta v_{ih} = \eta \sum_t (r_i^t - y_i^t) z_h^t$$

$$\Delta w_{hj} = \eta \sum_t \left[\sum_i (r_i^t - y_i^t) v_{ih} \right] z_h^t (1 - z_h^t) x_j^t$$

Multiple Hidden Layers

- MLP with one hidden layer is a [universal approximator](#) (Hornik et al., 1989), but using multiple layers may lead to simpler networks

$$z_{1h} = \text{sigmoid}(\mathbf{w}_{1h}^T \mathbf{x}) = \text{sigmoid}\left(\sum_{j=1}^d w_{1hj} x_j + w_{1h0}\right), h = 1, \dots, H_1$$

$$z_{2l} = \text{sigmoid}(\mathbf{w}_{2l}^T \mathbf{z}_1) = \text{sigmoid}\left(\sum_{h=1}^{H_1} w_{2lh} z_{1h} + w_{2l0}\right), l = 1, \dots, H_2$$

$$y = \mathbf{v}^T \mathbf{z}_2 = \sum_{l=1}^{H_2} v_l z_{2l} + v_0$$

Improving Convergence

- Momentum

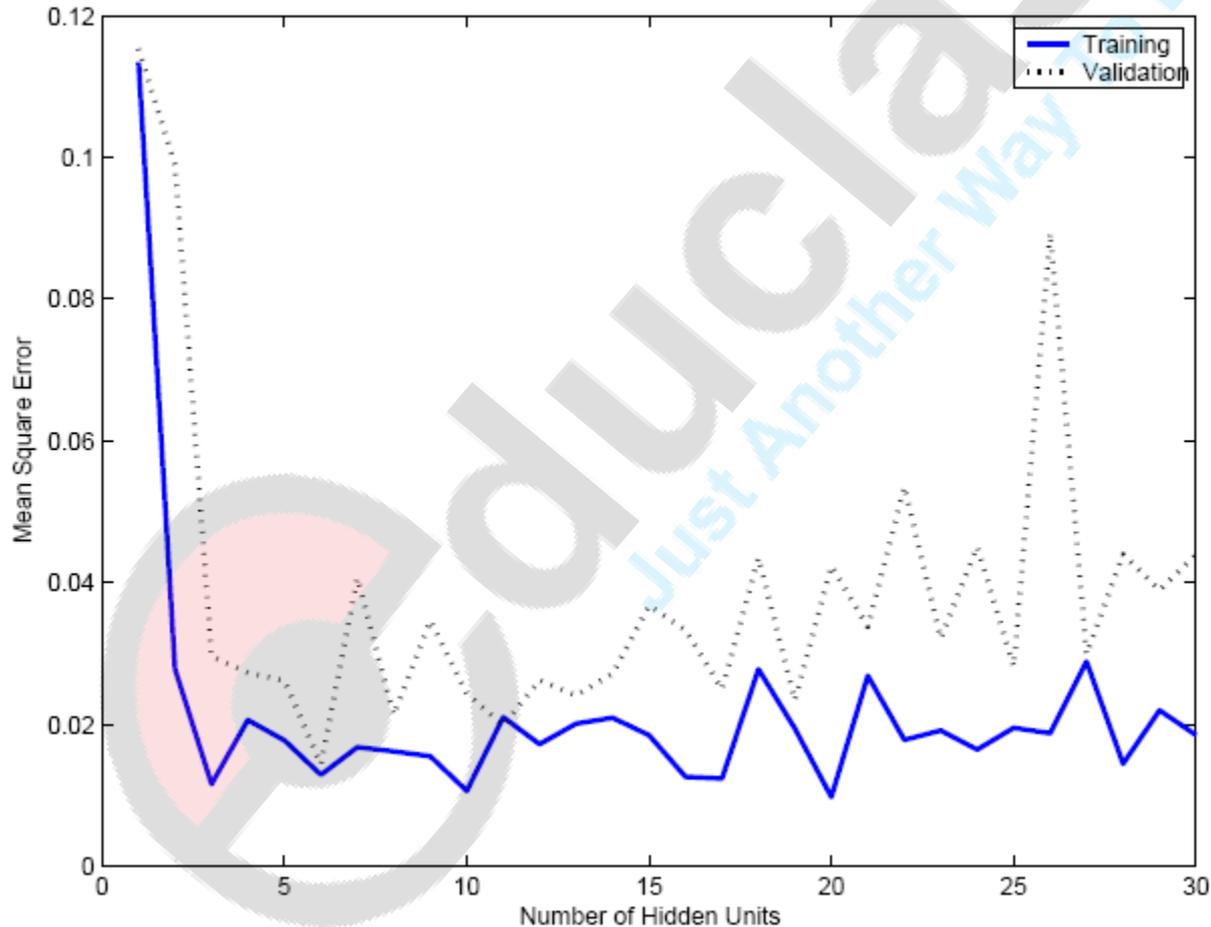

$$\Delta w_i^t = -\eta \frac{\partial E^t}{\partial w_i} + \alpha \Delta w_i^{t-1}$$

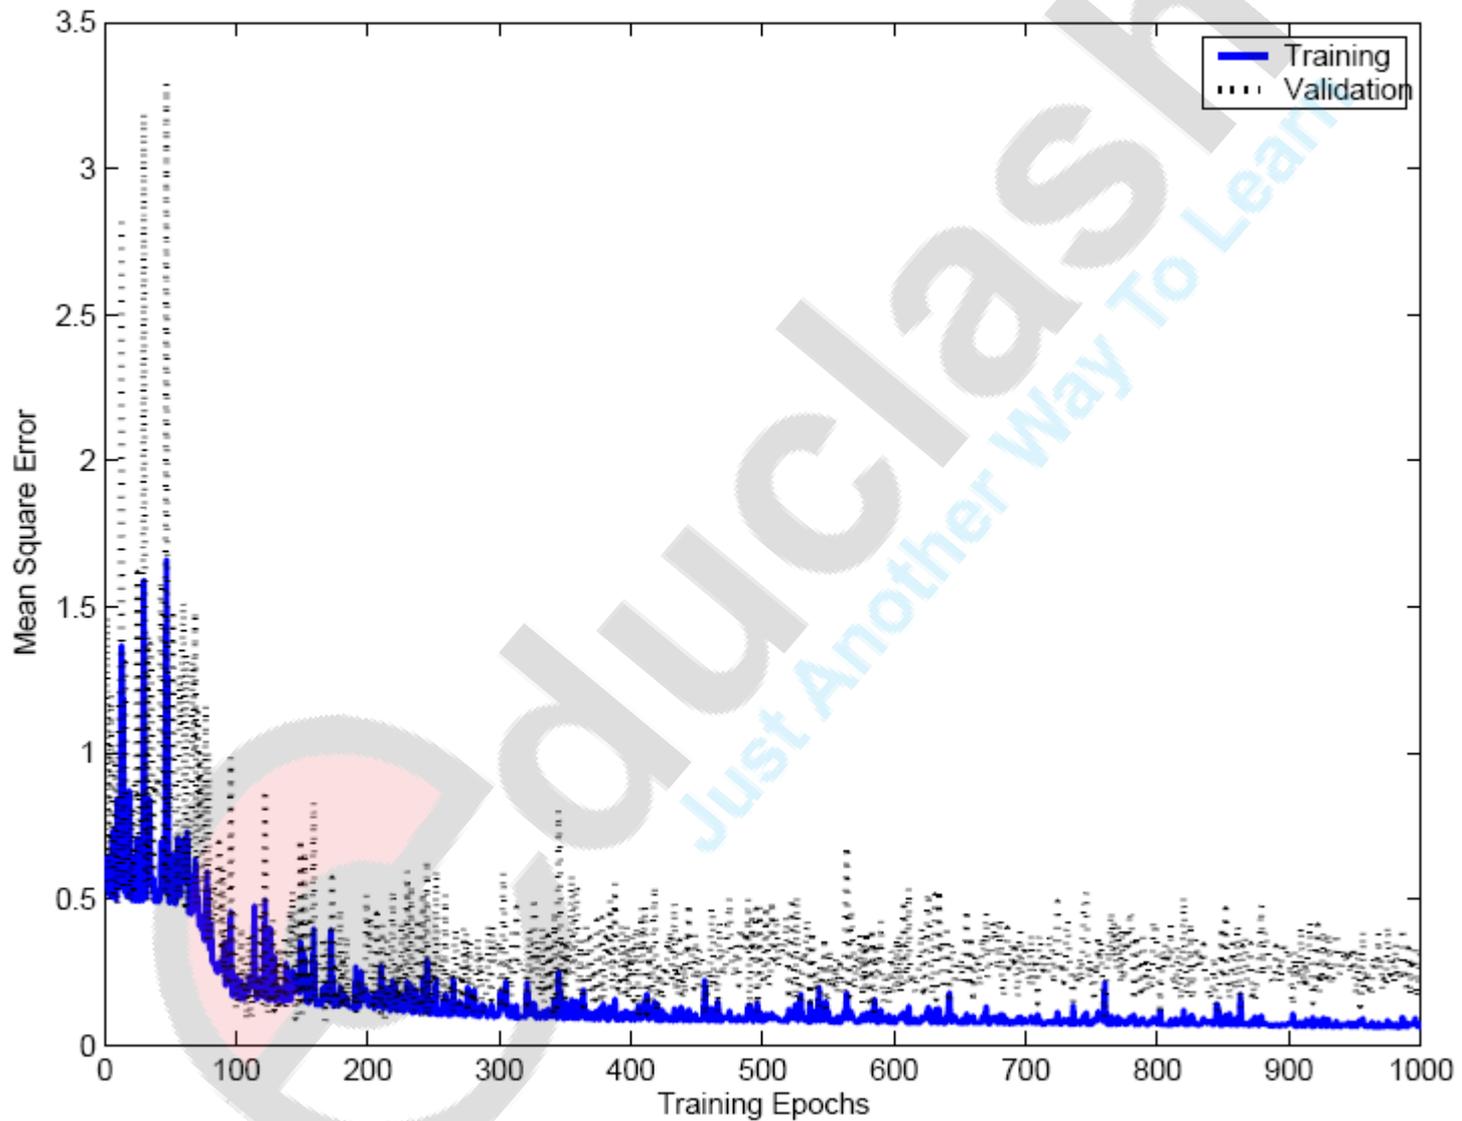

- Adaptive learning rate

$$\Delta \eta = \begin{cases} +a & \text{if } E^{t+\tau} < E^t \\ -b\eta & \text{otherwise} \end{cases}$$

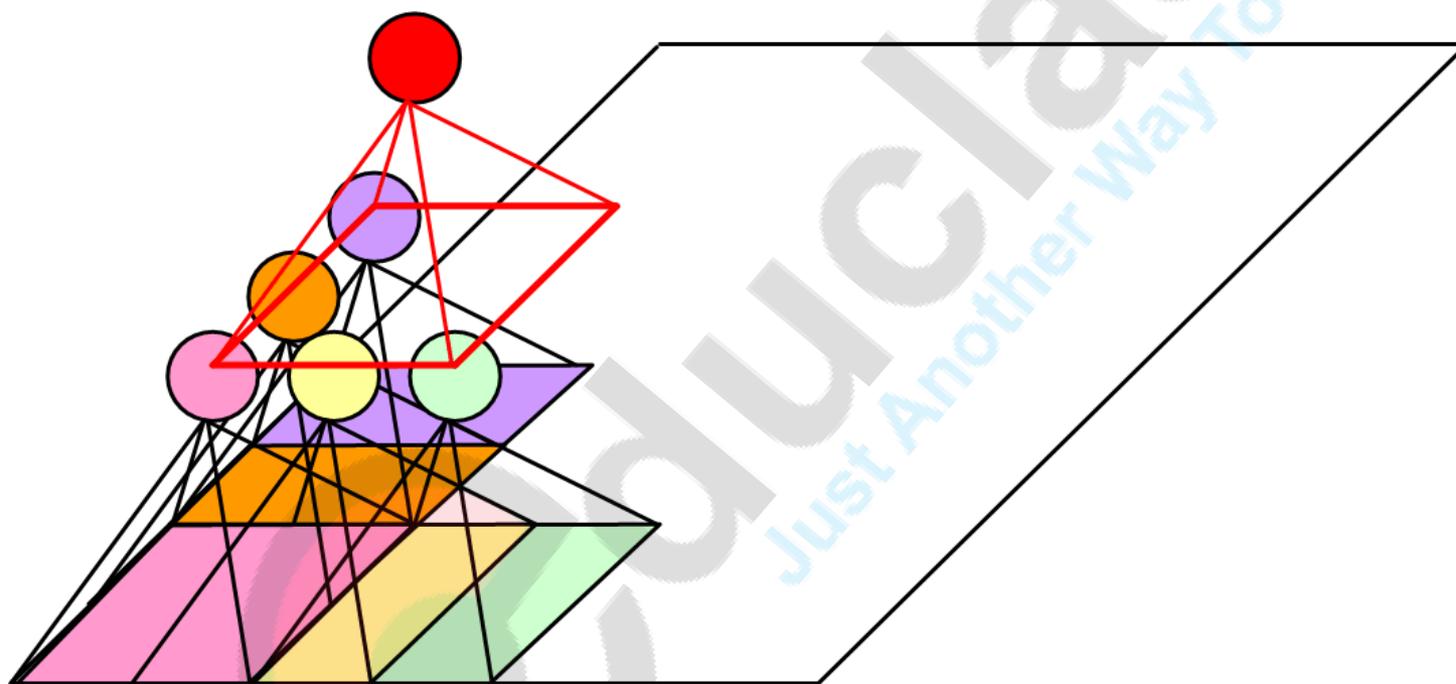

Overfitting/Overtraining

Number of weights: $H(d+1)+(H+1)K$

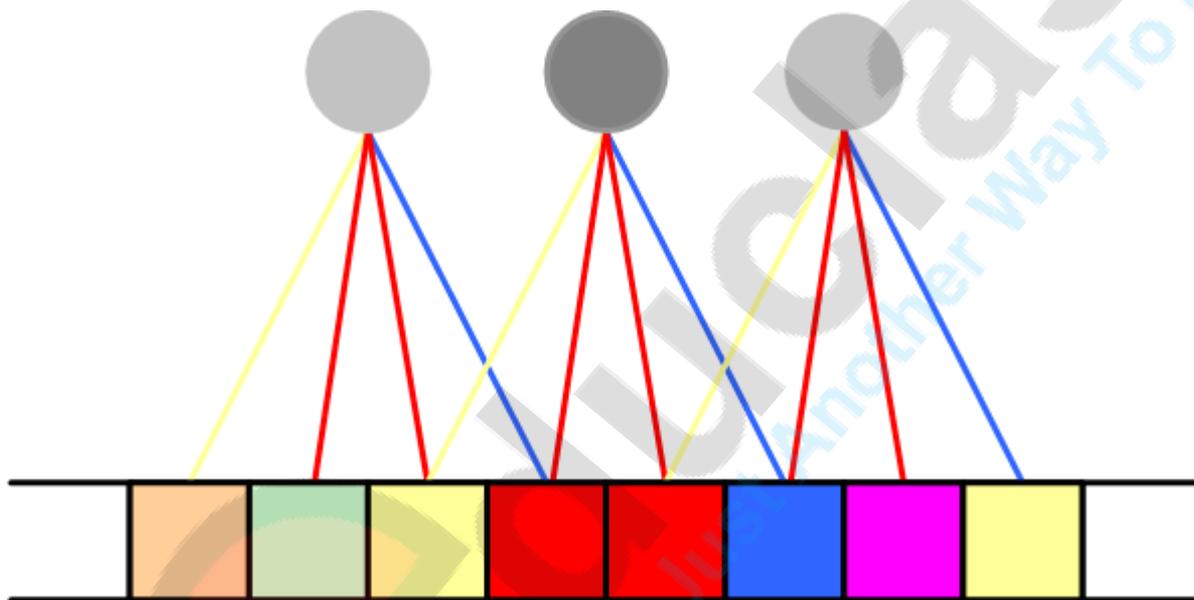

Structured MLP

(Le Cun et al, 1989)

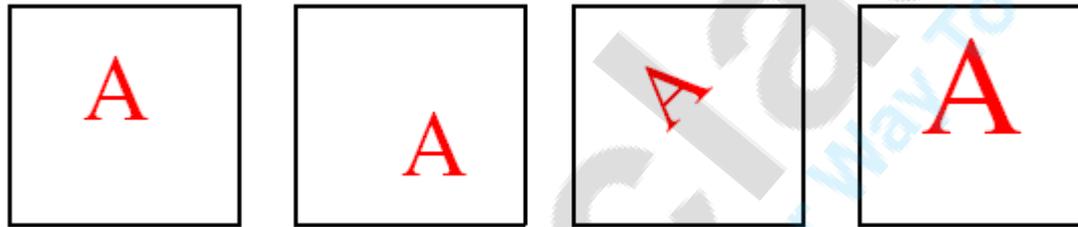

Weight Sharing

Hints

(Abu-Mostafa, 1995)

- Invariance to translation, rotation, size

- Virtual examples
- Augmented error: $E' = E + \lambda_h E_h$

If \mathbf{x}' and \mathbf{x} are the “same”: $E_h = [g(\mathbf{x} | \theta) - g(\mathbf{x}' | \theta)]^2$

Approximation hint:

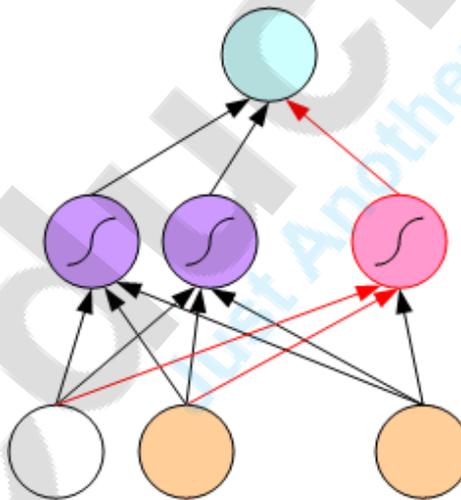

$$E_h = \begin{cases} 0 & \text{if } g(\mathbf{x} | \theta) \in [a_x, b_x] \\ (g(\mathbf{x} | \theta) - a_x)^2 & \text{if } g(\mathbf{x} | \theta) < a_x \\ (g(\mathbf{x} | \theta) - b_x)^2 & \text{if } g(\mathbf{x} | \theta) > b_x \end{cases}$$

Tuning the Network Size

- Destructive
- Weight decay:
- Constructive
- Growing networks

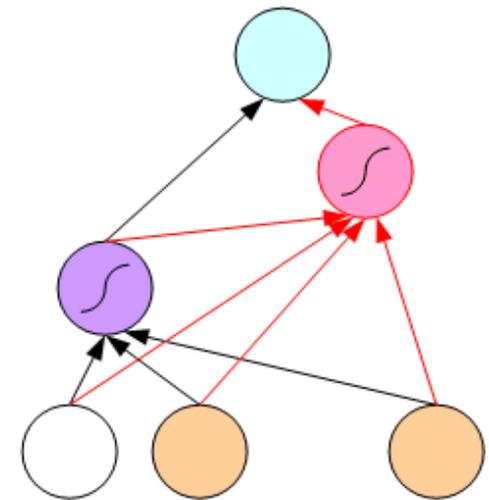

$$\Delta w_i = -\eta \frac{\partial E}{\partial w_i} - \lambda w_i$$

$$E' = E + \frac{\lambda}{2} \sum_i w_i^2$$

Dynamic Node Creation

(Ash, 1989)

Cascade Correlation

(Fahlman and Lebiere, 1989)

Bayesian Learning

- Consider weights w_i as random vars, prior $p(w_i)$

$$p(\mathbf{w} | \mathcal{X}) = \frac{p(\mathcal{X} | \mathbf{w})p(\mathbf{w})}{p(\mathcal{X})} \quad \hat{\mathbf{w}}_{MAP} = \arg \max_{\mathbf{w}} \log p(\mathbf{w} | \mathcal{X})$$

$$\log p(\mathbf{w} | \mathcal{X}) = \log p(\mathcal{X} | \mathbf{w}) + \log p(\mathbf{w}) + C$$

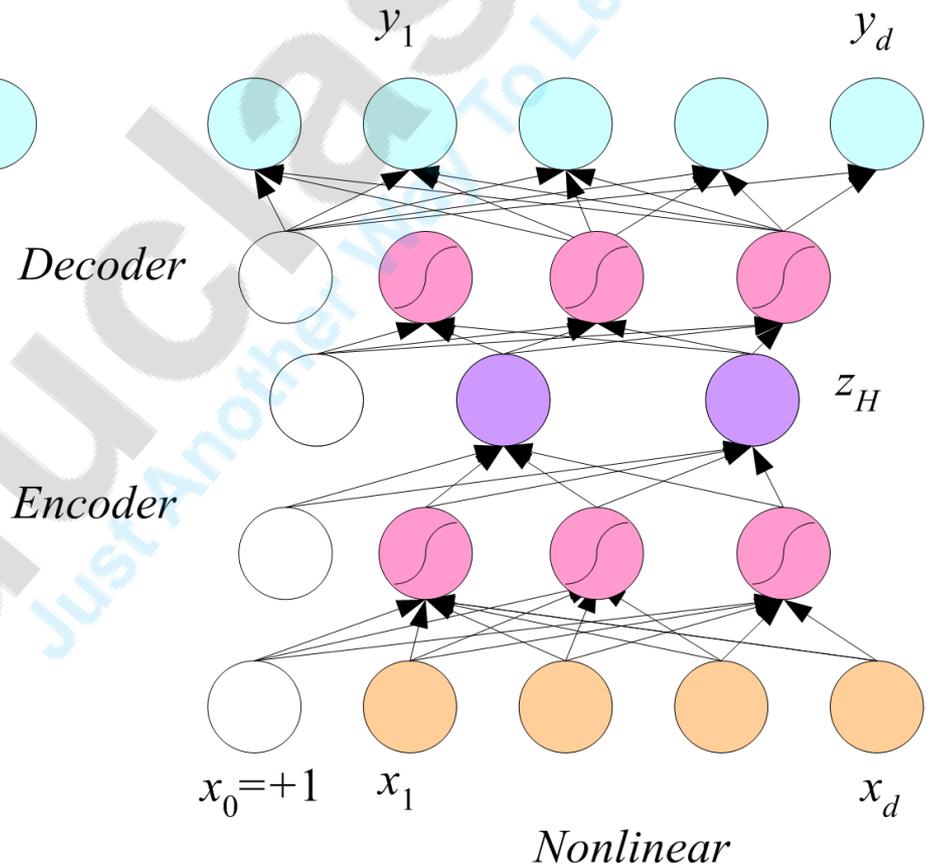

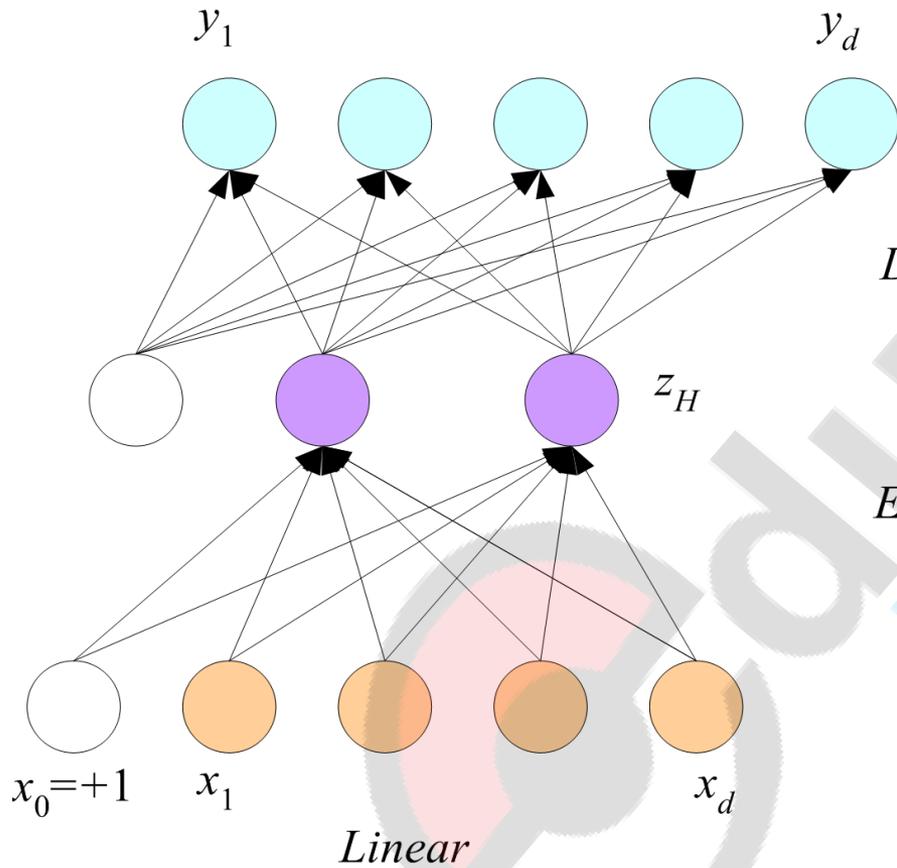

$$p(\mathbf{w}) = \prod_i p(w_i) \quad \text{where} \quad p(w_i) = c \cdot \exp\left[-\frac{w_i^2}{2(1/2\lambda)}\right]$$

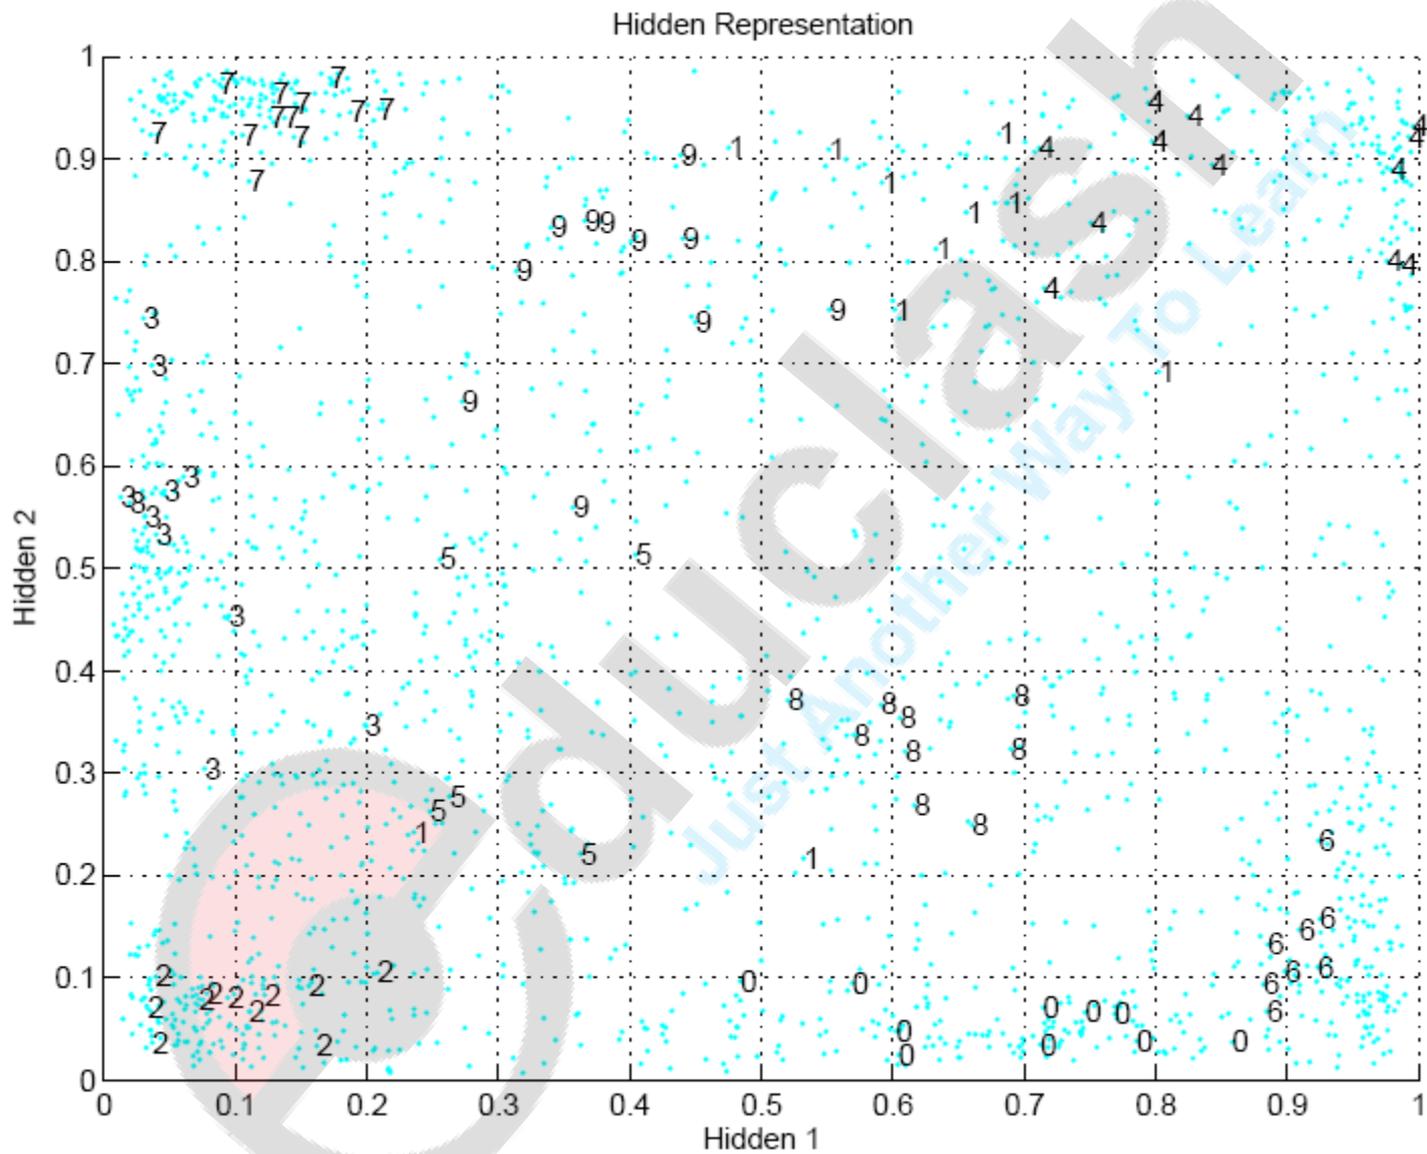

$$E' = E + \lambda \|\mathbf{w}\|^2$$

- Weight decay, ridge regression, regularization
cost = data-misfit + λ complexity

More about Bayesian methods in chapter 14

Dimensionality Reduction

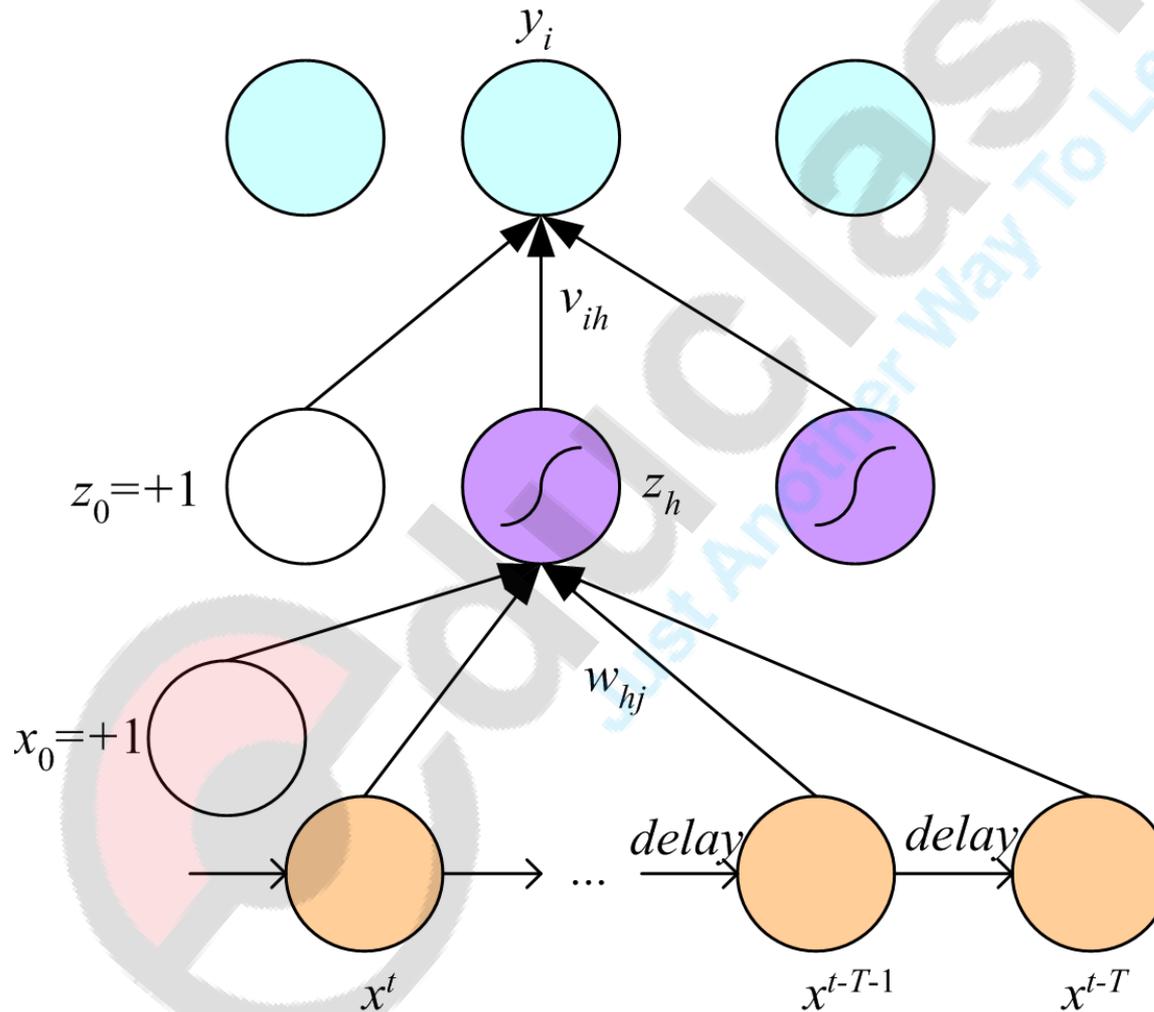

Learning Time

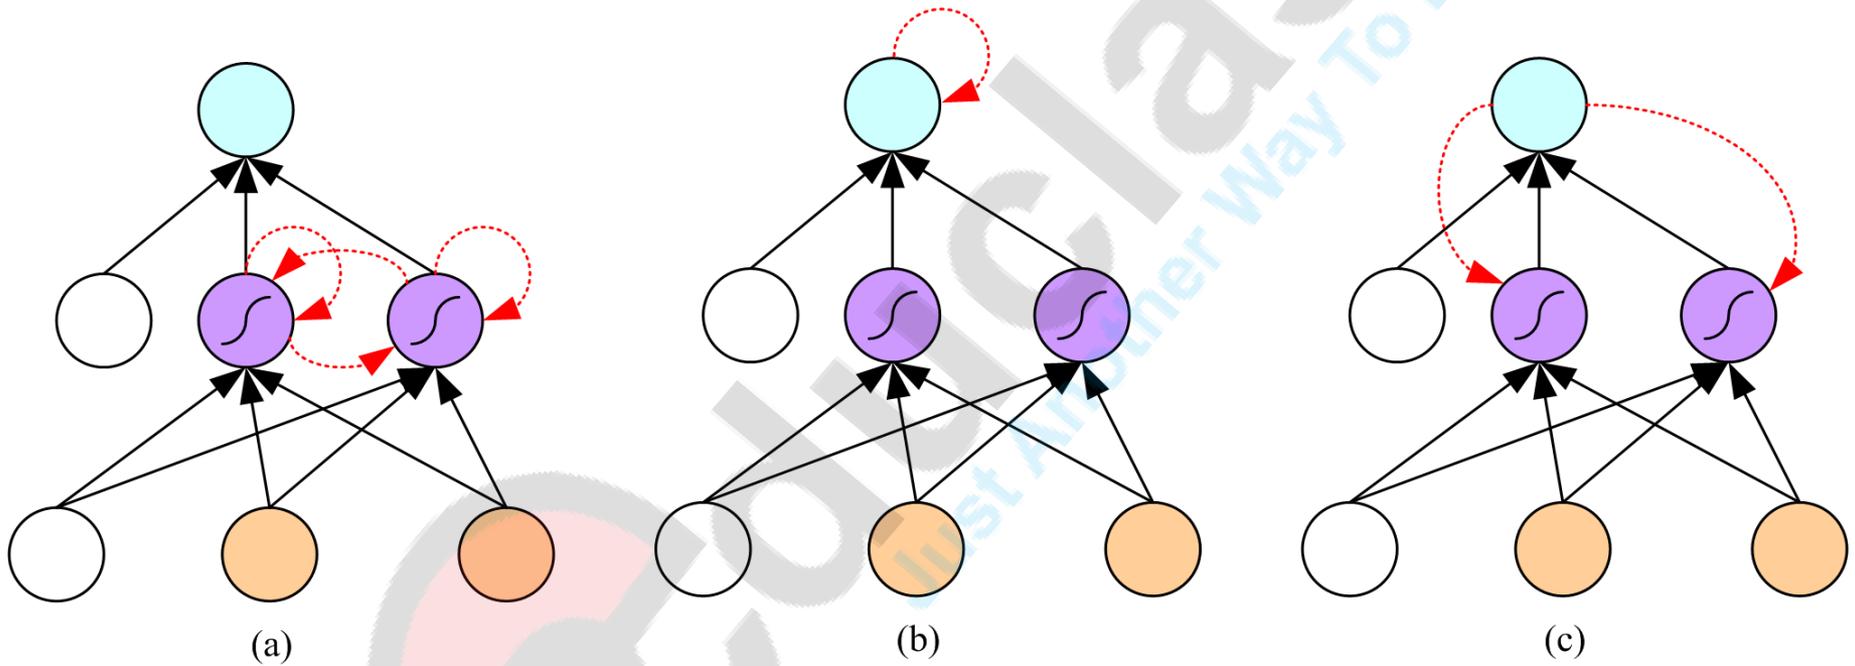

- Applications:
 - Sequence recognition: Speech recognition
 - Sequence reproduction: Time-series prediction
 - Sequence association
- Network architectures
 - Time-delay networks (Waibel et al., 1989)
 - Recurrent networks (Rumelhart et al., 1986)

Time-Delay Neural Networks

Recurrent Networks

Unfolding in Time
