AC :11.05.2017 Item No. 4.176

University of Mumbai, M.C.A., (Rev. 2016)

From Co-ordinator's Desk:

To meet the challenge of ensuring excellence in Master Program in Computer Applications (M.C.A.: referred as Master of Computer Applications) education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. Inline with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that,

Each Board of Studies shall prepare some Program Educational Objectives(PEO's) and give freedom to affiliated Institutes to add few (PEO's) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of Master of Computer Applications (MCA) education.

Semester based Credit and grading system enables a much required shift in focus from teacher centric to learner centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Choice Based Credit and Grading System are implemented for First Year of Master of Computer Applications (M.C.A.) from the academic year 2016-2017. Subsequently this system will be carried forward for Second Year and Third Year of M.C.A. in the academic year's 2017-2018 and 2018-2019 respectively.

Dr. S. K.Ukarande

Co-ordinator, Faculty of Technology, Member AcademicCouncil University of Mumbai, Mumbai

Preamble:

The MCA Choice based syllabus is designed considering various modes of effective teachinglearning and assessment that reflect in its interdisciplinary approach required for advanced application course. This integrated teaching methodology allows understanding of interaction between the different business areas required for IT enabled industries. This methodology also allows students to develop multiple skills such as critical logic analysis, numerical ability, Database programming, Algorithmic optimization with testing, networking, report writing, communication skill, presentation skills,independent research,and working with real-life case studies. These skills further enable the students to take a full, active and responsible role in the IT enabled industries.

The syllabus is directional in wide scope and allows the much desired flexibility to keep speed with the ever growing body of knowledge and explorations in IT enabled industries considering human side of enterprise. The course structures are carefully designed so that students get superiority in dealing with diverse situations when they step into the corporate world.

I would like to extend my thanks to Industries like IBM India Pvt. Ltd., Accenture, RBS India Pvt.Ltd., Myglamm, N.I.C. etc for their valuable inputs to strength the scope and contents of the syllabus. I would also like to extend my thanks to all M.C.A. Faculty members for their contribution in designing an outcome based curriculum.

Dr.Dhananjay R.Kalbande

Chairman- Ad-hoc Board of Studies of Computer Application, Member- Academic Council, University of Mumbai, Mumbai.

Basic Knowledge of data structures

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO301.1	Emphasize on basic concepts to organize, maintain and retrieve information from a
	DBMS.
CEO301.2	Cover the principles of database systems and recognize how they are used in
	developing data-intensive applications.
CEO301.3	To study an effective and efficient database system with the help of the rising
	trends of parallel and distributed databases.

Course Outcomes: At the end of the course, the students will be able to

MCA301.1	Understand various database concepts and apply them in real life applications.
MCA301.2	Determine the manner in which data can be stored, organized and manipulated in a
	database system.
MCA301.3	Apply various indexing and optimization techniques to process queries.
MCA301.4	Analyze and design database applications using suitable database techniques.

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Basic understanding of any Object Oriented Programming Language.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO302.1	Understand fundamentals of object-oriented programming in Java.
CEO302.2	Study various Java programming constructs.
CEO302.3	Learn application development using Java Components.

Course Outcomes (CO): At the end of the course, the students will be able to

MCA302.1	Solve computational problems using basic constructs.
MCA302.2	Find a solution for real world problems using Java
MCA302.3	Develop Web Applications using Server Side Programming.

Sr. No.	Module	Detailed Contents	Hrs
1.	Fundamentals of Java Programming	Features of Object-oriented Programming, History of Java, Features of Java, JVM Architecture, Differences between C++ and Java,Data types, variable, expressions, operators, control structures, arrays	03
2.	Object and Classes	Classes, Instance variables, Methods, Constructors, Access Specifiers, Abstract Classes and Wrapper Classes, Autoboxing and Unboxing, Inheritance, Polymorphism, Method Overriding, Use of Static, final, super and this keyword, Garbage collection and finalize method, string and mutable string, Inner Classes	04
3.	Packages and Interfaces	Package concept, Creating user defined package, Access control protection, Defining interface, Implementing interface.	02
4.	Generics and Collections	Generics - Generic Class, Creating Generic Classes, Generic Methods, Bounded Type, Collections- Collections and Generics, Collection Classes-Links, Vector, Linked Lists, Maps, HashMap, WildCards, LambdaExpressions - Lambda Type Inference, Lambda Parameters, Lambda Function Body, Returning a Value From a Lambda Expression, Lambdas as Objects	05
5.	Exception Handling	Exception handling fundamentals, Exception types, Exception as objects, Exception hierarchy, Exception Keywords - Try, catch, finally, throw, throws, Creating User defined Exceptions, Assertion, Annotations	04
6.	Multi- threading	Java thread model, Life Cycle of Thread, Working with Thread class and the Runnable interface, Thread priorities, ThreadGroup class, Inter thread communication, Synchronization.	04
7.	File handling	Input streams and Output streams, FileInputStream and FileOutputStream, Binary and Character streams, Buffered Reader/ Writer, Object serialization and Deserialization.	04
8.	Event handling and GUI programming	Comparison of AWT and SWING, Applet class, Applet API hierarchy, Life cycle of Applet, Delegation Event Model, Event handling mechanisms, Swing components, Swing Component Hierarchy- Basic and Advanced Components, JApplet, Layout managers, Adapter class, Inner class.	05
9.	Database Programming	JDBC architecture, Types of drivers, Java.sql package, Establishing connectivity and working with connection interface, Working with statement interface, Working with PreparedStatement interface, Working with ResultSet interface, Working with ResultSetMetaData interface.	05
10.	Web development using Servlets	Introduction to servlets, Servlet vs CGI, Servelet API overview, Servlet Life cycle, Generic servlet, HTTPServlet, ServletConfig, ServletContext, Handling HTTP Request and response –GET / POST method, request dispatching, Using cookies, Session tracking	06
11.	Web development using JSP	Introduction to JSP, JSP Architecture, JSP Directives, JSP scripting elements, Default objects in JSP, JSP Actions, JSP with beans and JSP with Database, Error handling in JSP, Session	06

		tracking techniques in JSP, Introduction to custom tags, JSTL tags in detail	
12.	Introduction to	Introduction to Spring Framework, Spring Architecture, Spring	04
	Spring	Aspect of Object Oriented Concepts – Join Point and Point Cuts.

Computer Networks, Databases

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO303.1	Understand information assurance as practiced in computer operating systems,						
	distributed systems, networks and representative applications.						
CEO303.2	Study cryptography and key encryption techniques used today.						
CEO303.3	Comprehend relevant security parameters in the internet, web, database systems and applications						

Course Outcomes (CO): At the end of the course, the students will be able to

MCA303.1	Understand the requirement of information security and a clear understanding of
	its importance
MCA303.2	Be familiar with information security threats and countermeasures, and familiar
	with information security designs using available secure solutions
MCA303.3	Use the database security mechanisms, intrusion detection systems, formal
	models of security, cryptography, network ,web security

Syllabus

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction	Principles of Security, Attacks, Services and Mechanisms, Integrity check, digital Signature, authentication.	03
2	Cryptography	Private Key Cryptography: Block Encryption, DES Algorithm, Problems with DES, Variations of DES, IDEA Algorithm, Uses of Secret key Cryptography; ECB, CBC, OFB, CFB Public Key Encryption : RSA Symmetric and Asymmetric Key Cryptography together	08
3	Authentication	Types of Authentication- Password-based authentication, address-based authentication, cryptographic authentication, smart cards, biometrics, mutual authentications, reflection attacks, Message Digest : MD5 ,SHA,MAC ,HMAC, Digital Certificate process, KDC-working, multi domain KDC, Kerberos	10
4	Internet Security	Transport Layer Security: SSL, SET Email Security : PGP, S/MIME, Comparison, IP security : IPSec, Web Services Security : XML, SOAP, WSDL and UDDI, SSI, WS-Security, SAML, Ws-Trust, WS-Security Policy	08

Basic knowledge of Mathematics and Statistics.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO304.1	Study formulation, analysis and solving science, engineering and business problems.
CEO304.2	Study mathematics and mathematical modelling using computers to forecast the
	implications of various choices.
CEO304.3	Study the selection of the best alternatives from the available choices.

Course Outcomes (CO): At the end of the course, the students will be able to

MCA304.1	Apply Operations research methodology to a broad range of problems in business and industry.
MCA304.2	Use mathematics and mathematical modelling using computers to forecast the implications of various choices.
MCA304.3	Solve optimization problems.
MCA304.4	Think of new methods for solving optimization problems.

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Basic Knowledge of SQL and Software Engineering concepts

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOL301.1	Make the students understand basic and relatively advanced issues in modern
	database management, information storage and retrieval.
CEOL301.2	Study various database techniques in developing data-intensive applications.
CEOL301.3	Explore the need of software testing in current industry scenario, understanding and knowledge of foundations, techniques and tools in area of software.
CEOL301.4	Understand the essential characteristics requirements and usage of Automation tools.

Course Outcomes (CO): At the end of the course, the students will be able to

MCAL301.1	Design database systems using available tools.								
MCAL301.2	Develop applications using basic and modern database techniques as per								
	organization requirements.								
MCAL301.3	Demonstrate software testing tools								
MCAL301.4	Create test design documents and test reports								

Syllabus

Sr. No.	Module	Detailed Contents	Hrs						
1	DDL and DML	Data Definition Language: Create, Alter, Drop, Rename,	06						
		Truncate							
		Data Manipulation Language: Insert, Update, Delete, Select							
	Constraints	Not Null, Unique Key, Primary Key, Foreign Key, Check,	02						
		adding and Dropping a Constraint

Basic understanding of programming fundamentals and software engineering.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOL302.1	Understand, developing, testing and debugging Java programs.
CEOL302.2	Study UML tools
CEOL302.3	Explore object-oriented design using UML

Course Outcomes (CO): At the end of the course, the students will be able to:

MCAL302.1	Develop a simple software application using the object oriented approach.
MCAL302.2	Design and develop a Java Web Applications.
MCAL302.3	Apply UML tools for object oriented software modeling.

Syllabus

Sr. No.	Module	Detailed Contents	Hrs.				
1	Fundamentals of Java Programming	Program on creation of classes and using different types of function. Program using constructor/method overloading Program on passing Object as parameter to a function Program using static and final variable and methods					
2	Objects and Classes	Program to perform different operations on Array and String Program using Interface and Inheritances. Program using Wrapper class to cover auto boxing and un boxing	04				
3	Packages and Interfaces	Programs based on creating and using packages along with access control specification. Programs based on defining, creating and implementing interfaces.	04				
4	Generics, Collections and Lambda Expression	Programs based on Generics, Collections and Lambda Expression	04				
5	Exception Handling	Programs based on exception handling mechanism covering all keywords. Programs based on creating own exceptions.	04				
6	Multi-threading	Programs based on Multithreading approach, thread priorities, Inter thread communication, and Synchronization.	04				
7	File Handling	Programs based on Input streams and Output streams, FileInputStream and FileOutputStream, Binary and Character streams, Buffered Reader/ Writer, Object serialization and Deserialization.	04				
8	Event handling and GUI programming	Programs based on designing GUI Interface. Programs based on creating an applets, use of containers, components, event handling, layout managers, Adapter classes, Inner class etc.	04				
9	Database Programming	Programs based on database connectivity using MS-Access/ Oracle/ MySQL as a backend covering all the database operations.	04				
10	Web development using Servlets	Programs based on handling request and response –GET / POST method, Programs based on cookies	04				

		and Session tracking.	
11	Web development using JSP	Programs demonstrating JSP Syntax and semantics. Programs based on directives and error objects. Programs based on session tracking.	04
12	Introduction to Spring Frameworks	Basic programs based on Spring framework	03
13	Introduction to UML	UML Overview, The Nature and purpose of Models	01
14	Modeling Requirements: Use Cases	Capturing a System Requirement, Use Case Relationships, Use Case Overview Diagrams	02
15	Modeling System Workflows: Activity Diagrams	Activity Diagram Essentials, Activities and Actions, Decisions and Merges, Doing Multiple Tasks at the Same Time, Time Events, Objects, Sending and Receiving Signals, Starting an Activity, Ending Activities and Flows, Partitions (or Swimlanes), Managing Complex Activity Diagrams	02
16	Modeling a System's Logical Structure: Introducing Classes and Class Diagrams Modeling a System's Logical Structure: Advanced Class Diagrams	What is a Class?, Getting Started with Classes in UML, Visibility, Class State: Attributes, Class Behavior: Operations, Static Parts of Your Classes Class Relationships, Constraints, Abstract Classes, Interfaces, Templates	02
17	Bringing Your Classes to Life: Object Diagrams	Object Instances, Links, Binding Class Templates	01
18	Modeling Ordered Interactions: Sequence Diagrams	Participants in a Sequence Diagram, Time, Events, Signals, and Messages, Activation Bars, Nested Messages, Message Arrows, Bringing a Use Case to Life with a Sequence Diagram, Managing Complex Interactions with Sequence Fragments,	02
19	Focusing on Interaction Links: Communication Diagrams Focusing on Interaction Timing: Timing Diagrams	Participants, Links, and Messages, Fleshing out an Interaction with a Communication Diagrams, Communication Diagrams Versus Sequence Diagrams What Do Timing Diagrams Look Like?, Building a Timing Diagram from a Sequence Diagram, Applying Participants to a Timing Diagram, States, Time, A Participant's State-Line, Events and Messages, Timing Constraints	02

20	Completing the Interaction Picture: Interaction Overview Diagrams	The Parts of an Interaction Overview Diagram, Modeling a Use Case Using an Interaction Overview	01
21	Managing and Reusing Your System's Parts: Component Diagrams	What is a Component?, A Basic Component in UML, Provided and Required Interfaces of a Component, Showing Components Working Together, Classes That Realize a Component, Ports and Internal Structure, Black-Box and White-Box Component Views	02
22	Modeling an Object's State: State Machine Diagrams	Essentials, States, Transitions, States in Software, Advanced State Behavior, Composite States, Advanced Pseudostates, Signals, Protocol State Machines	02
23	Modeling Your Deployed System: Deployment Diagrams	Deploying a Simple System, Deployed Software: Artifacts, What Is a Node?, Hardware and Execution Environment Nodes, Communication Between Nodes, Deployment Specifications, When to Use a Deployment Diagram	02
24	UML tools and techniques for web-based/object oriented Applications	UML Tools, Different UML Notations for Web application	02
25	Creation of documentation such as SRS, SDS from UML diagrams. Generation of code from UML model.	Basic Concept, Generating by Templates, Using Batches, Installing and Uninstalling Templates	02
26	Mini Project	A Mini – Project based on Java Programming and UML using an integrated approach. (Maximum Two students in a Group).	10

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOPR301.1	Conceptualize knowledge with emphasis on team work, effective								
	communication, critical thinking and problem solving skills.								
CEOPR301.2	Adapt to a rapidly changing environment by having learned and applied new								
	skills and new technologies.								
CEOPR301.3	Study designing small projects in a multidisciplinary environment.								

Course Outcomes (CO): At the end of the course, the students will be able to

MCAPR301.1	Design, implement and evaluate a mini-project.
MCAPR301.2	Gain project management skills.
MCAPR301.3	Work effectively in small groups on medium scale computing projects.
MCAPR301.4	Demonstrate the ability to produce a technical document

Sr.	Module	Detailed Contents
No.		
1	Introduction	• Introduction of the project(SRS)
		Problem definition
		Objective of Project
		• scope of Project
2	System Study	Existing System

Basic knowledge of data base concepts

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO401.1	Acquire the knowledge of various concepts and tools behind data warehousing			
	and mining data for business intelligence			
CEO401.2	Study data mining algorithms, methods and tools			
CEO401.3	Identify business applications of data mining			

Course Outcomes (CO): At the end of the course, the students will be able to:

MCA401.1	Use conceptualization of BI techniques
MCA401.2	Apply data warehouse concepts for data analysis and report generation
MCA401.3	Develop industry level data mining skills using software tools
MCA401.4	Make use of relevant theories, concepts and techniques to solve real-world BI
	problems

Sr. No.	Module	Detailed Contents	Hrs
1	Business Intelligence-	Introduction and overview of BI-Effective and timely decisions, Data Information and knowledge, BI Architecture, Ethics and BI. BI Applications- Balanced score card, Fraud detection, Telecommunication Industry, Banking and finance, Market segmentation.	06
2	Prediction methods and models for BI	Data preparation, Prediction methods-Mathematical method, Distance methods, Logic method, heuristic method-local optimization technique, stochastic hill climber, evaluation of models	06
3	BI using Data Warehousing	Introduction to DW, DW architecture, ETL Process, Top-down and bottom-up approaches, characteristics and benefits of data mart, Difference between OLAP and OLTP. Dimensional analysis- Define cubes. Drill- down and roll- up – slice and dice or rotation, OLAP models- ROLAP and MOLAP. Define Schemas- Star, snowflake and fact constellations.	08
4	Data Mining and Preprocessing	Data mining- definition and functionalities, KDD Process, Data Cleaning: - Missing values, Noisy data, data integration and transformations. Data Reduction: - Data cube aggregation, dimensionality reduction- data compression, Numerosity reduction- discretization and concept hierarchy.	06
5	Associations and Correlation	Association rule mining:-support and confidence and frequent item sets, market basket analysis, Apriori algorithm, Incremental ARM, Associative classification- Rule Mining.	06
6	Classification and Prediction	Introduction, Classification methods:-Decision Tree- ID3, CART, Bayesian classification- Baye'stheorem(Naïve Bayesian classification),Linear and nonlinear regression.	08
7	Clustering	Introduction, categorization of Major, Clustering Methods:- partitioning methods- K-Means. Hierarchical- Agglomerative and divisive methods, Model- based- Expectation and Maximization.	08
8	Web mining and Text mining	Text data analysis and Information retrieval, text retrieval methods, dimensionality reduction for text. Web Mining: - web content, web structure, web usage.	04

- Basic Understanding of Object Oriented Programming
- Basic Understanding of Web Technologies

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO402.1	Study the architecture of Dot Net framework
CEO402.2	Understand the basic principles of C# development
CEO402.3	Learn advanced windows and web development techniques using dotNET

Course Outcomes (CO): At the end of the course, the students will be able to

MCA402.1	Create UI applications using C#
MCA402.2	Design and develop secure web applications using asp.net according to industry
	standards
MCA402.3	Define and create custom web services

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction to	Introduction to Dot Net Framework	08
	Dot Net and	Architecture of Dot NET Framework, CLR-Working and	
	C#	Features, CTS, CLS, Assemblies-Types, Structure and	
		Metadata,GAC	
		C# Basics	
		Data Types(Value Types and Reference Types),Control	
		Structures, Operators and Expressions, Arrays	
2	OOP C#	Classes and Objects	10

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

Basic Mathematics

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO403.1	Understand the concepts of output primitives of Computer Graphics.
CEO403.2	Learn 2 D and 3 D graphics Techniques.
CEO403.3	Study various Image Processing techniques

Course Outcomes (CO):At the end of the course, the students will be able to:

MCA403.1	Demonstrate the algorithms to implement output primitives of Computer Graphics.
MCA403.2	Apply 2 D transformation techniques.
MCA403.3	Analyze 3 D transformation techniques.
MCA403.4	Apply image processing techniques.

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction to Computer Graphics	Introduction to Computer Graphics, Elements of Computer Graphics , Graphics display systems.	02
2	Output primitives & its Algorithms	Points and Lines, Line Drawing algorithms :DDA line drawing algorithm, Bresenham's drawing algorithm ,Circle and Ellipse generating algorithms : Mid-point Circle algorithm ,Mid-point Ellipse algorithm ,Parametric Cubic Curves :Bezier curves .Fill area algorithms: Scan line polygon fill algorithm ,Inside-Outside Tests, Boundary fill algorithms, Flood fill algorithms	15
3	2D Geometric Transformatio ns & Clipping	Basic transformations, Matrix representation and Homogeneous Coordinates, Composite transformation,shear & reflection. Transformation between coordinated systems. Window to Viewport coordinate transformation,Clipping operations – Point clipping Line clipping : Cohen – Sutherland line clipping, Midpoint subdivision,Polygon Clipping:Sutherland – Hodgeman polygon clipping ,Weiler – Atherton polygon clipping	12
4	Basic3DConcepts&Fractals	3D object representation methods: B-REP, sweep representations, CSG, Basic transformations, Reflection, shear. Projections – Parallel and PerspectiveHalftone and Dithering technique. Fractals and self-similarity: Koch Curves/snowflake, Sirpenski Triangle	06
5	Introduction to Image Processing	Fundamental Steps in Digital Image Processing ,Components of an Image Processing System ,Basic Concepts in Sampling and Quantization, Representing Digital Images, Spatial and Gray- Level Resolution	05
6	Image Enhancement Techniques	Image Enhancement in the Spatial Domain: Some Basic Intensity Transformation Functions: Image Negatives, Log Transformations, and Power Law Transformations. Piecewise- Linear Transformation Functions: Contrast stretching, Gray-level slicing, Bit plane slicing. Introduction to Histogram, Image Histogram and Histogram Equalization, Image Subtraction, and Image Averaging	12

CEO4051.1	Understand the fundamental of forensics
CEO4051.2	Have in depth knowledge of relationship between IT and Forensics
CEO4051.3	Study different aspects of digital evidences

Course Outcomes: At the end of the course, the students will be able to:

MCA4051.1	Develop computer forensic awareness
MCA4051.2	Utilizing the knowledge for investigations in order to solve computer crime
MCA4051.3	Perform best practices for incidence response
MCA4051.4	Apply computer forensic tools for investigation

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction	Introduction of Cyber Crime, Computer roles in Crime, Introduction to Digital Forensics and its uses. Forensics Evidence, Collection, Processing and the phases of forensics investigation, Types of Computer Forensics	06
2	Data Recovery	Encryption and Decryption, Recovery deleted files, Identifying false images and Steganography methods for media data including text, image and audio data	08
3	Digital Evidence Controls	Uncovering attacks that evade detection by event viewer and task manager. Memory image acquisition techniques and their limitations	08
4	Network Forensics	Different attacks in network, collecting and analyzing network based evidence in windows and Unix environment, Email forensics for standard protocols	06
5	Mobile Phone and Android Forensics	Crime and mobile phones, evidences, forensic procedures, files present in SIM Card, Device data, External memory dump and evidences in memory card, Android forensic fundamental, Data extraction techniques, screen lock bypassing techniques	08
6	Cloud Forensics	Fundamentals of cloud forensics, Cloud crimes, Uses of cloud forensics and its challenges, Interaction of Email system with local and cloud storage	08
7	Real forensic Case and Its Tools	Processing a complete forensic case and preparing a forensic report and Introduction of some forensic tools- Helix, FTK, Autopsy and FIRE	08

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

Overview of Probability, Statistics and Discrete Mathematics and basics of Computers.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO4052.1	Understand the basic system concepts and definitions of the types of system.
CEO4052.2	Provides techniques to model and simulate each system.
CEO4052.3	Ability to analyze the system and make use of information to improve its performance.

Course Outcomes (CO): At the end of the course, the students will be able to:

MCA4052.1	Apply functional modeling to model the activities of a static system.					
MCA4052.2	Understand the behavior of a dynamic system and create a model for a dynamic					
	system.					
MCA4052.3	Simulate the real systems					

Sr.	Module	Detailed Contents	Hrs
No.			
1	Introduction to Simulation	What is modeling and Simulation: History, Application areas, Advantages and Disadvantages, Role of modeling and simulation for Problem solving, Types of simulation models and examples: static (Monte Carlo simulation and its application to industries), dynamic (Bank), deterministic (arrivals at scheduled appointment time), stochastic (random arrivals and service time), Discrete event simulation (queuing system), continuous (communication and traffic system). Steps in simulation study. Uses of simulation with examples(Experimentation, experience, ethics, human interaction).	04
2	Description and solutions of simulation examples	Simulation of Queuing system (G/G/1, D/D/1,, M/G/1, M/M/1) characteristics, notation, Measures of performance of Queuing system, example of single channel of Queue, the Able Baker call center problem.Simulation of inventory system (News Paper seller problem), Other examples: Reliability problem, Use of random normal numbers for simulation, project simulation, Lead Time Demand, Job Shop Model.	12
3	Simulation	Simulation Examples based on statistical distributions.	12
-	Models using	Discrete distributions, Continuous distributions, Poisson	
	Random	process.Random- Number Generation: Properties of Random	
	Numbers and	Numbers, Generation of Pseudo- Random Numbers,	
	Variates	Techniques for Generating Random Numbers, Tests for	
		Random Numbers. Random Variate Generation:Inverse	
		Transformation Technique –Uniform Distribution, Exponential	
		Distribution, Weibull Distribution. Convolution Method for	
		Erlang Distribution, Acceptance-Rejection Technique – Poisson Distribution.	
4	Input and	Input Models with Data: Data Collection, Identifying the	12
4	Input and Output Analysis	Distribution with Data - Parameter Estimation, Goodness of Fit Tests: Chi-Square Test, Kolmogorov-Smirnov Test. Selecting Input Models without Data , Time-Series Input Models Output Analysis: Stochastic Nature of Output Data - Types of Simulation with respect to Output Analysis- Measures of Performance and their Estimation (Point Estimation, confidence Interval Estimation). Output Analysis for Terminating Simulations (Confidence Interval Estimation)Output Analysis for Steady-State Simulation.(Error estimation)	12
5	Verification	Model Building, Verification and Validation; Verification of	06
	and Validation	Simulation Models - Calibration and Validation of Models:-	
		Face Validity, Validation of Model Assumptions, Validating	
		Input-Output Transformations - Input-Output Validation using	
		Historical Input Data, Input-Output . Validation using a Turing	

		Test. Optimization via simulation examples.							
6	Modelling and	Simulation of manufacturing systems, Simulation of computer							
	Simulation of	systems, Simulation of supermarket. Simulation of							
	Real World	Transportation model, business model, Medical models, Social							
	Problems	Science models.

Computer Networks

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO4053.1	Relate the paradigm shift from circuit switched network to packet switched network.
CEO4053.2	Understand the core technologies, and architectures of the Next Generation
	Networks
CEO4053.3	Summarize technology options for Multi-Service Networks

Course Outcomes (CO): At the end of the course, the students will be able to:

MCA4053.1	Evaluate the importance of packet switching for NGN
MCA4053.2	Analyze and differentiate various architectures of a next generation network (NGN)
MCA4053.3	Comprehend the multiple services offered by NGN

Sr. No	Module	Detailed Contents	Hrs
1	Introduction	Changes, Opportunities and Challenges, Technologies, Networks, and Services, Requirements for NGN, Next Generation Network Concept, Next Generation Society	08
2	Next Generation Technology	Technologies influencing change, IP Networks (Migration from circuit Switching to Packet Switching), building blocks for NGN, Wireline NG Technologies: Fiber to Premises, Long-Haul Managed Ethernet, Wireless NG Technologies: Broadband Bluetooth & ZigBee, Long Term Evolution, VOIP, Multi service Flexible Networks architecture. VPNs, ITU - NGN Architecture, Numbering, naming and addressing in NGN	10
3	IMS and Convergence Management	IMS Architecture, IMS Services : Push to Talk over cellular Service, IMS Based FMC Services	08
4	IPTV &HbbTV	Introduction, Architecture of NGN Based IPTV, NGN Based IPTV Services, Protocols Used for IPTV, HbbTV (Hybrid Broadcast Broadband TV) Services, HBB–NEXT, Multiple-User Environment	08
5	Next Generation Multiservice Technology	MPLS, MPLS services and components, MPLS &QoS, overview of VPN, layer2 VPN, layer 3 VPN	08
6	NGN Services	Software- Based Business Services, High- Definition Voices, Three Dimensional Television, Mobile and Manages Peer-to Peer Service, Converged/ Personalized / Interactive Multimedia Services, Grand- Separation for Pay-per-Use Service, Consumer and Business- Oriented Apps Storefront	10

Students should have knowledge of SET theory, SET relations and Probability.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO4054.1 Identify and describe problems that are amenable to solution by AI methods.					
CEO4054.2	Study appropriate soft computing techniques for problem solving				
CEO4054.3	Study optimization techniques based on soft computing approach				

Course Outcomes (CO): At the end of the course, the students will be able to

MCA4054.1	Understand various AI concepts
MCA4054.2	Solve the problems using neural networks techniques.
MCA4054.3	Apply fuzzy logic techniques to find solution of uncertain problems.
MCA4054.4	Analyze the genetic algorithms and their applications

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction to AI	 Artificial Intelligence : Role of AI in engineering, AI in daily life, Intelligence and Artificial Intelligence, Different task domains of AI, Programming methods, Limitations of AI Intelligent Agent: Agent, Performance Evaluation, task environment of agent, Agent classification, Agent architecture 	05
2	Problem Solving	Problems, problem spaces and search: Define the problem as a state space search, Production systems, Problem characteristics, Production system characteristic, Issues in design of search program Search Techniques: DFS, BFS, Hill Climbing	06
3	Knowledge Representati on	Knowledge Representation : Need to represent knowledge, Knowledge representation with mapping scheme, Properties of good knowledge-based system, Knowledge representation issues, AND-OR graph, Types of knowledge	09
4	Concepts of Soft Computing	Soft Computing: Hard computing Vs Soft Computing, Soft computing constituents – ANN, Fuzzy Logic, GA Applications of Soft Computing	02
5	Neural Network	 Artificial Neural Network: Introduction, Fundamental Concept, Artificial Neural Network, Brain vs. Computer - Comparison Between Biological Neuron and Artificial Neuron, Basic Models of Artificial Neural Network Supervised Learning Network-Linear Separability, Perceptron Networks, Adaptive Linear Neuron (Adaline), Multiple Adaptive Linear Neurons, Back-Propagation Network. Unsupervised Learning Networks- MaxNet 	12
6	Fuzzy Logic	 Introduction to Fuzzy Logic, Classical Sets and Fuzzy Sets: Introduction to Fuzzy Logic, Classical Sets (Crisp Sets), Fuzzy Sets Classical Relations and Fuzzy Relations: Introduction, Cartesian Product of Relation, Classical Relation, Fuzzy Relations Membership Functions: Introduction, Features of the Membership Functions, Fuzzification, Methods of Membership Value Assignments Defuzzification: Introduction, Lambda-Cuts for Fuzzy Sets (Alpha-Cuts), Lambda-Cuts for Fuzzy Relations, Defuzzification Methods 	10
7	Fuzzy Inference System	Fuzzy Inference System : Truth Values and Tables in Fuzzy Logic, Fuzzy Propositions, Formation of Rules, Decomposition of Rules (Compound Rules), Aggregation of Fuzzy Rules, Fuzzy Inference Systems (FIS)- Construction and Working Principle of FIS, Methods of FIS, Overview of Fuzzy Expert System	04
8	Genetic Algorithm	Genetic Algorithm : Basic concepts, Difference between genetic algorithm and traditional methods, Simple genetic algorithm, Working principle, Procedures of GA, Genetic operators-reproduction, Mutation, crossover.	04

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOL403.1	To provide essential professional skills needed to make a positive impact on work and social lives				
CEOL403.2	Understand the corporate culture and adapt to various situations				
CEOL403.3	Improve their etiquettes, interpersonal skills and professional image				

Course Outcomes (CO): At the end of the course, the students will be able to

MCAL403.1	Develop skills in communication, business correspondence, presentations, group
	discussions and interviews
MCAL403.2	Apply valuable strategies and interpersonal skills thereby making themselves more
	productive and better capable to lead others
MCAL403.3	Understand the importance of teamwork and learn to perform to the best of their
	ability, both individually and as team players

Sr. No	Module	Detailed Contents	Hrs
1	Soft Skills Introduction	Soft-Skills Introduction What are Soft Skills? Significance of Soft- Skills – Soft-Skills Vs. Hard Skills - Selling Soft- Skills – Components of Soft Skills – Identifying and Exhibiting Soft-Skills	01
2	Communicat	Concept and meaning of communication, methods of communication, verbal and non-verbal communication, barriers to communication, techniques to improve communication. Communication in a business organization: Internal (Upward, Downward, Horizontal, Grapevine). External Communication, 7 C's of communication. Active Listening, Differences between Listening and Hearing, Critical Listening, Barriers to Active Listening, Improving Listening Practical (Role plays, case studies)	02
3	Written Business Communicat ion	 Written Communication: Principles of Correspondence, language and style in official letter (full block format, modified block format), Business letters (enquiry to complaints and redressal), Application letter, CV writing, , E-mail etiquette, Documentation of Meetings, Notice, Agenda, Minutes of Meetings. Practical (Practice on CV, Business Letters, Applications, Notice, Agenda, Minutes of Meetings) 	04
4	Presentation Skills	 Presentation techniques, Planning the presentation, Structure of presentation, Preparation, Evidence and Research, Delivering the presentation, handling questions, Time management. Visual aids. Practical - Presentation by students in groups of maximum 3 on Organizational Behavior topics allocated by faculty. Topics have to cover – Personality: Meaning, Personality Determinants, Traits, Personality types and its, impact on career growth, Personality and Values, Perception and Individual Decision Making. Diversity in Organizations Attitude: Meaning, Components of Attitude, changing attitude and its impact on career growth Motivation Goal setting: SMART (Specific, Measurable, Attainable, Realistic, Timely) Goals, personal and professional goals Time Management. Learning in a group, Understanding Work Teams, Dynamics of Group Behavior, Techniques for effective participation Emotional intelligence 	
5	Effective Public Speaking	Public Speaking, Selecting the topic for public speaking, Understanding the audience, Organizing the main ideas, Language and Style choice in the speech, Delivering the speech Practical (Extempore)	03
6	Group Discussions	Group Discussion Skills, Evaluation components, Do's and Don'ts. Practical (Group Discussions)	03
7	Interview	Interview Techniques, Pre-Interview Preparation, Conduct during	03

Techniques	interview, Verbal and non-verbal communication, common mistakes.	
	Practical (Role plays, mock interviews)

Pre-requisites:

Basic knowledge of networks and communication

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO501.1	Learn the concepts of wireless communication and mobile networks
CEO501.2	Identify different wireless technologies and its applications
CEO501.3	Acquire knowledge on generation of cellular networks and its standards used

Course Outcomes (CO): At the end of the course, the students will be able to:

MCA501.1	Understand the concept of cellular communications, advantages and its limitations
MCA501.2	Compare the various wireless technologies and its applications
MCA501.3	Apply the appropriate technology in the applications

Sr. No.	Module	Detailed Contents	Hrs
1	Wireless Technology Fundamentals	Introduction to Mobile and wireless communications, Overview of radio transmission frequencies, Signal Antennas, Signal Propagation, Multiplexing – SDM,FDM, TDM,CDM, Modulation – ASK,FSK,PSK, Advanced FSK, Advanced PSK, OFDM, Spread Spectrum – DSSS,FHSS, Wireless Transmission Impairments – Free Space Loss, Fading, Multipath Propagation, Atmospheric Absorption, Error Correction – Reed Solomon, BCH, Hamming code, Convolution Code (Encoding and Decoding)	08
2	Wireless Networks	Wireless network, Wireless network Architecture, Classification of wireless networks – WBAN, WPAN, WLAN, WMAN, WWAN. IEEE 802.11, IEEE 802.16, Bluetooth – Standards, Architecture and Services	06
3	Cellular wireless Networks	Principles of cellular networks – cellular network organization, operation of cellular systems, Handoff. Generation of cellular networks – 1G, 2G, 2.5G, 3G and 4G.	06
4	Mobile communication systems	GSM – Architecture, Air Interface, Multiple Access Scheme, Channel Organization, Call Setup Procedure, Protocol Signaling, Handover, Security, GPRS – Architecture, GPRS signaling, Mobility management, GPRS roaming, network, CDMA2000- Introduction, Layering Structure, Channels,Logical Channels, Forward Link and Reverse link physical channels, W-CDMA – Physical Layers, Channels, UMTS – Network Architecture, Interfaces, Network Evolution, Release 5, FDD and TDD, Time Slots, Protocol Architecture, Bearer Model Introduction to LTE	12
5	Mobile Network Layer	Mobile IP – Dynamic Host Configuration Protocol, Mobile Ad Hoc Routing Protocols– Multicast routing	06
6	Mobile Transport Layer	TCP over Wireless Networks – Indirect TCP – Snooping TCP – Mobile TCP – Fast Retransmit / Fast Recovery Transmission/Timeout Freezing-Selective Retransmission – Transaction Oriented TCP, TCP over 2.5 / 3G wireless Networks	07
7	Application Layer	WAP Model- Mobile Location based services -WAP Gateway – WAP protocols – WAP user agent profile, Caching model-wireless bearers for WAP - WML – WMLScripts – WTA.	07

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

Pre-requisites:

Computer Networks, Operating Systems

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO502.1	Introduce advance distributed concepts.
CEO502.2	Emphasize on design techniques and constraints of distributed computing
CEO502.3	Emphasize on analysis of cloud computing, its security and its storage

Course Outcomes (CO): At the end of the course, the students will be able to:

MCA502.1	Distinguish between distributed computing and parallel computing
MCA502.2	Understand concepts of SOA.
MCA502.3	Demonstrate different cloud technologies
MCA502.4	Designing security and storage in cloud technologies.

Sr.	Module	Detailed Contents	Hrs
<u>No.</u> 1	Introduction 4-	Design concepts of distributed systems distributed and	11
I	Introduction to	Basic concepts of distributed systems, distributed computing	11
	Distributed	models, software concepts, issues in designing distributed systems, client server model	
	Computing		
	Concepts	Inter Process Communication	
		Fundamental concepts related to inter process communication	
		including messagepassing mechanism, a case study on IPC in	
		MACH, concepts of group communication and case study of group	
		communication CBCAST in ISIS, API for Internet Protocol.	
		Remote Communication	
		Remote Procedural Call (RPC), Remote Method Invocation	
		(RMI),a case study on Sun RPC, a case study on JAVA RMI.	0.0
2	Clock	Introduction of clock synchronization, global state mutual Exclusion	02
2	synchronization	algorithms, election algorithms.	0.
3	Distributed	Fundamental concepts of DSM, types of DSM, various hardware	06
	Shared Memory	DSM systems, Consistency models, issues in designing and	
		implementing DSM systems.	
4	Distributed	Resource management, process management, fault tolerance, code	09
	System	migration, CORBA: Overview of CORBA, Communication,	
	Management	Processes, Naming, and Synchronization.	
	and Object		
	based System		
5	Introduction to	Parallel computing, scope of parallel computing, Abstract model of	08
	Parallel	serial & parallel computation, pipelining, data parallelism, control	
	Computing	parallelism, scalability, topologies in processor organization,	
		parallel computing design consideration, parallel algorithms &	
		parallel architectures, applications of parallel computing.	
6	Advances in	Service-Oriented Architecture, Elements of Service-Oriented	04
	Distributed	Architectures, RPC versus Document Orientation, Major Benefits	
	Computing	of Service- Oriented Computing, Composing Services, Goals of	
		Composition, Challenges for Composition, Spirit of the Approach.	
7	Fundamentals	Evolution of Cloud Computing ,cluster computing Grid computing,	12
	of Cloud	Grid computing versus Cloud Computing, Key Characteristics of	
	computing,	cloud computing.	
	cloud Security	Cloud models: Benefits of Cloud models, Public Cloud, Private	
	and Storage	Cloud, Hybrid Cloud, Community Cloud, Shared Private Cloud,	
		Dedicated Private Cloud, Dynamic Private Cloud, Savings and cost	
		impact, Web services delivered from cloud, Platform as a service,	
		Software as a service, Infrastructure as a service.	
		Cloud Security Fundamentals and Storage	
		Privacy and security in cloud, Security architecture, Data security,	
		Identity and access management, security challenges, Storage	
		basics, Storage as a service providers, aspects of data security.

Pre-requisites:

System Analysis & Design, Software Engineering and Project Management, UML.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO503.1	Develop interest in User Experience Engineering (UXE) Process
CEO503.2	Understand how to design Effective and Efficient User Interfaces for intended users
CEO503.3	Learn tools and techniques for Prototyping and Evaluating User Experiences

Course Outcomes (CO): At the end of the course, the students will be able to:

MCA503.1	Understand and create interest in User Experience Design(UXD)
MCA503.2	Analyze the framework and methodological approach for user experience design.
MCA503.3	Apply prototyping and problems solving techniques related to user experience design.
MCA503.4	Design real life application with end-to-end understanding of User experience practices.

Sr.	Module	Detailed Contents	Hrs
No.			
1	Introduction to	What is UX, Ubiquitous interaction, Emerging desire for	06
	UX Design	usability, From usability to user experience, Emotional impact	
		as part of the user experience, User experience needs a business	
		case, Roots of usability.	
2	The UX Design	Introduction, A UX process lifecycle template, Choosing a	06
	- life cycle	process instance for your project, The system complexity space,	
	C C	Meet the user interface team, Scope of UX presence within the	
		team, More about UX lifecycles.	
3	The UX Design	Introduction, The system concept statement, User work activity	12
	Process –	gathering, Look for emotional aspects of work practice,	
	Understand	Abridged contextual inquiry process, Data-driven vs. model-	
	Users	driven inquiry, History., Contextual Analysis, Extracting	
		Interaction Design Requirements, Constructing Design-	
		Information Models.	
4	The UX Design	Information ,Architecture and Interaction Design and	10
	Process	Prototyping Introduction, Design paradigms, Design thinking,	
		Design perspectives, User personas, Ideation, Sketching, More	
		about phenomenology, Mental Models and Conceptual Design,	
		Wireframe, Prototyping	
5	The UX Design	UX Evaluation and Improve UX Goals, Metrics and Targets,	12
	Process	UX Evaluation Techniques Formative vs summative ,types of	
		formative and informal summative evaluation methods, types of	
		evaluation data, some data collection technics, variations in	
		formative evaluation results, informal summative dada analysis,	
		formative data analysis, feedback to process, evaluation report	
6	UX methods	Introduction, Basics of agile SE method, drawbacks of agile SE	06
	for Agile	method from the UX perspective, A synthesized approach to	
	Development	integrate UX

Pre-requisites:

Database Management Systems, SQL

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEODLE5041.1	Provide fundamental techniques and principles of Big Data Analytics
CEODLE5041.2	Identify the tools required to manage and analyze Big Data
CEODLE5041.3	Understand the data analytics techniques required to solve complex real world problems

Course Outcomes (CO): At the end of the course, the students will be able to:

MCADLE5041.1	Develop and maintain reliable, scalable systems using Apache HADOOP
MCADLE5041.2	Write Map Reduce based application
MCADLE5041.3	Differentiate between conventional SQL and NoSQL
MCADLE5041.4	Analyze and develop Big Data solutions using HIVE and PIG

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction	Distributed file system and its issues, Introduction to big data, big data characteristics, types of big data, traditional vs. big data approach, big data applications	08
2	Hadoop	Why Hadoop? Hadoop architecture, Hadoop components HDFS and YARN, comparison between YARN 1 and YARN 2 architecture, HDFS federation : Name Node, Data Node, Resource Manager, Job Tracker, Task Tracker Hadoop Ecosystem : Scoop, HIVE, PIG, Flume, Zookeeper, HBASE Hadoop installation in pseudo distribution mode, running HDFS commands	10
3	Map Reduce	Understanding Map Reduce, Map Task, Reduce Task, speculative execution, partioner and combiner in Map Reduce Running sample Map Reduce Program: Word Count. Algorithm using Map Reduce : -matrix vector multiplication, -grouping and aggregation -relational algebra operations	10
4	NoSQL	What is NoSQL? NoSQL - Case study, data architecture pattern: key value, column family, document store. HBASE overview, HBASE data model, row oriented vs. column oriented storage, HBASE architecture, HBASE shell commands	08
5	HIVE	HIVE : background, architecture, warehouse directory and meta-store, HIVE query language, loading data into table, HIVE built-in functions, joins in HIVE, HIVE installation, HiveQL: querying data, sorting and aggregation	08
6	PIG	PIG : background, architecture, PIG Latin Basics, PIG execution modes, PIG processing – loading and transforming data, PIG built-in functions, filtering, grouping, sorting data Installation of PIG and PIG Latin commands	08

- FrancisdaCosta, "Rethinking the Internet of Things: A Scalable Approach to Connecting Everything", 1st Edition, Apress Publications, 2013

Assessment:

Internal:

Assessment consists of two tests (T1 and T2). The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

Prerequisite:

Computer Graphics

Course Educational Objectives (CEO): At the end of the course students will be able to

CEODLE 5044.1	CEODLE 5044.1 Study various multimedia system design components.			
CEODLE 5044.2	Understand compression and decompression techniques and different image			
	formats.			
CEODLE 5044.3	Interpret storage and retrieval technologies, Project planning and costing.			

Course Outcomes (CO): At the end of the course, the students will be able to

MCADLE 5044.1	Perceive multimedia architecture and its latest applications.			
MCADLE 5044.2	Implement compression, decompression techniques and different formats			
	for image, audio and video.			
MCADLE 5044.3	Plan and develop multimedia projects			

Sr. No.	Module	Detailed Contents	Hrs
1	Fundamentals of Multimedia Systems Design	An Introduction Multimedia Systems, Design Fundamentals, Elements of multimedia, Multimedia system architecture - High resolution graphics display, IMA Architectural Framework, Network architecture for multimedia systems, Defining objects for Multimedia systems: Text, Images, Audio and video	07
2	Multimedia Input and Output Technologies	Key Technology Issues, Touch screen, Pen Input, Video and Image Display Systems, Print Output Technologies, Image Scanners, Digital Voice and Audio, Video Images and Animation, Full Motion Video.	11
3	Multimedia File format and standards	RTF, TIFF,RIFF, MIDI, JPEG DIB, AVI, MIDI audio, JPEG & MPEG standards, MIDI Vs Digital Audio, Analog display standards ,Digital display standards, Digital video	10
4	Compression and Decompression Techniques	Introduction to coding and compression techniques- Lossy and Lossless, Entropy encoding, Run length encoding, Huffman coding, JPEG compression process, Discrete Cosine Transform, Video compression- MPEG-1, MPEG- 2, MPEG-4, Audio Compression-MPEG, Adaptive differential pulse code modulation,	12
5	Storage and retrieval technologies	Magnetic Media Technology, RAID-Level-0 To 5, Optical Media, WORM optical drives	06
6	Planning and costing	Idea Analysis, Pretesting, Task Planning, Prototype Development, Alpha Development, Beta Development, Delivery, Scheduling, Estimating	06

Basic understanding of morals/ethics, social values and technical writing.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOILE5051.1	Understand basics of intellectual property.							
CEOILE5051.2	Relate the knowledge of Intellectual Property Laws of India as well as							
	International treaty procedures.							
CEOILE5051.3	Get acquaintance with Patent search and patent filing procedure and							
	applications.							

Course Outcomes (CO): At the end of the course, the students will be able to:

MCAILE5051.1	Understand Intellectual Property assets.
MCAILE5051.2	Assist individuals and organizations in capacity building.
MCAILE5051.3	Distinguish information across organizations.
MCAILE5051.4	Work for development, promotion, protection, compliance, and enforcement
	of Intellectual Property and Patenting.

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction to IPR	Introduction: Concepts and meaning of Intellectual property, IPR, Different category of IPR instruments - Patents, Trademarks, Copyrights, Industrial Designs, Semiconductor Integrated Circuits Layout-Design, Plant variety protection, Geographical indications, Transfer of	10
		 technology etc. Indian Scenario of IPR: Introduction, History of IPR in India, Overview of IP laws in India, Indian IPR, Administrative Machinery, Major international treaties signed by India. 	
2	Ownership and Enforcement of IPR	 Enforcement of Intellectual Property Rights: Introduction, Extent of problem, Factors that create and sustain counterfeiting/piracy, International Organizations, Agencies, and treaties active in IPR enforcement (e.g. INTA,WIPO,WTO, Madrid Protocol, Paris convention, NAFTA,TRIPS). Ownership of intellectual property rights: Ownership, Changes of Ownership 	08
3	Emerging Issues and Management of IPR	Emerging Issues of IPR: IPRrelationship with software and technology, Challenges for IP in digital economy, e-commerce, human genome, biodiversity and traditional knowledge etc. Management of IPR: Introduction, Overall management of IPRs ,Management of non- registrable rights	06
4	Copyrights	Introduction and law, Types of copyright, Ownership and duration of copyright, Marking, Moral rights, Other relevant law, Copyright use and misuse, Exceptions to copyright infringement – fair dealing, Taking action against infringers, Criminal liability, Copyright licenses, Copyright internationally – general and non-technical works, Technical copyright, Copyleft, Managing copyright	08
5	Trademarks	Introduction to trade marks, Registrable trademarks, Unregistered trademarks, 'get-up' and 'passing-off', Criminal provisions and counterfeiting, Avoid being sued, Trade marks in other countries, Domain names	07
6	Patents	Introduction, Process to get a patent, Filing a patent application, Patent applications in India and other countries, Search Patents on Indian Patent Office Website	08
7	Confidential information	Introduction, Confidential disclosure, Employees, Confidential computer programs, Unwanted confidences, Managing confidential information, Know-how and show-how, Legal remedies, Confidentiality in other countries, Summary of confidentiality	05

Basic knowledge of Hardware, software and networking

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOILE5054.1	Understand what Green IT is and how we can meet standards set for Green Computing
CEOILE5054.2	Comprehend Green IT from the perspective of hardware, software, storage, and networkingat the enterprise level.
	and networkingat the enterprise level.
CEOILE5054.3	Strategize Green Initiatives and look at the future of Green IT

Course Outcomes (CO): At the end of the course, the students will be able to

MCAILE5054.1	Create awareness among stakeholders and promote green initiatives in their
	environments leading to a green movement.
MCAILE5054.2	Adopt special skills such as knowledge about energy efficiency, ethical IT
	assets disposal, carbon footprint estimation.
MCAILE5054.3	Create eco-friendly environment.

Basic overview of Advanced Distributed Computing and Cloud Computing.

Course Educational Objectives (CEO): At the end of the course student will be able to

CEOL502.1	To Understand Concepts of distributed and cloud computing
CEOL502.2	To learn open source technology.
CEOL502.3	To teach various protection and security mechanisms for data using cloud concepts

Course Outcomes (CO): At the end of the course student will be able to

MCAL502.1	Design and Develop the solution to a problem using java concepts
MCAL502.2	Demonstrate use of java Concepts
MCAL502.3	Explore various advanced distributed concepts.

Sr. No.	Session	Detailed Contents	Hrs
1	Remote Process Communicati on	Develop a program for multi-client chat server. Concept: Develop a multi-client chat server application where multiple clients chat with each other concurrently. The messages sent by different clients are first communicated to the server and then the server, on behalf of the source client, communicates the messages to the appropriate destination client.	08
2	Remote Procedure call	ImplementationofRemoteProcedureCallConcept:This application will demonstrate the remote procedurecommunication.a)Implement a Server calculator containing ADD(),MUL(),SUB()etc.b)Implement a Date Time Server containing date() and time()	08
3	Remote Method Invocation	Remote Method Invocation supporting the distributed computing in java. Concept: Create a client and server application where the client invokes methods via an interface. These methods are implemented on the server side. Create the necessary STUBS and SKELETONS. a) Design a Graphical User Interface (GUI) based calculator (scientific or standard). Operations should be performed using both mouse and keyboard. b) Retrieve time and date function from server to client. This program should display server date and time. c) Equation solver. The client should provide an equation to the server through an interface. The server will solve the expression given by the client. (a-b)2 = a2 - 2ab + b2; If $a = 5$ and $b = 2$ then return value $= 52 - 2.5.2 + 22 = 9$.	14
4	Memory Management	In a = 5 and b = 2 then return value = 52 = 2.5.2 + 22 = 9. Implementation of Shared Memory a) Write a program to increment counter in Shared memory	04
5	Remote Object Communicati on	 a) while a program to interement counter in bilated memory Remote objects for database access. Concept:Pass remote objects from the server to the client. The client will receive the stub object (through remote interfaces) and saves it in an object variable with the same type as the remote interface. Then the client can access the actual object on the server through the variable. Make use of JDBC and RMI for accessing multiple data access objects. a) Retrieve the students information from the college database. b) Retrieve the list of books available in the library. c) Retrieve the MTNL billing information from the MTNL database 	10
6	Enterprise Java Beans	 Sample program for basic arithmetic operations implemented in session bean. Sample program on message bean demonstration. 	10

		3)Sample program to Book Information using Entity bean	
		4) Demonstrate a program on Statefull and Stateless Bean.	
7	Mutual	Implementation of mutual exclusion using any of the technique.	08
	Exclusion	Concept : This technique solves the mutual exclusion existing in	
		the process communication.	
		a) Centralized	
		b) Distributed	
		c) Token Ring	
		Note: Use any one technique	
8	Cloud	Study of cloud technologies : Virtualization Technologies, Virtual	08
	Computing	Machine Technology, Cloud data center	
9	Grid Services	Study of Grid services using various tools.(any two)	02
10	Case studies	Google, Microsoft, AWS.	06

Based on the recommended syllabus student should provide one Presentation/Case study.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOPR501.1	Conceptualize knowledge with emphasis on team work, effective								
	communication, critical thinking and problem solving skills.								
CEOPR501.2	Adapt to a rapidly changing environment by having learned and applied new skills and new technologies.								
CEOPR501.3	Study designing small projects in a multidisciplinary environment.								

Course Outcomes (CO): At the end of the course, the students will be able to:

MCAPR501.1	Design, implement and evaluate a project.
MCAPR501.2	Gain project management skills.
MCAPR501.3	Work effectively and ethically in a team towards project development
MCAPR501.4	Demonstrate the ability to produce a technical document.

Sample Guidelines for Preparing and Documenting the Project Report

Sr. No.	Module	Detailed Contents
1	Introduction	 Introduction of the project Problem definition Objective of Project scope of Project
2	Literature Survey	 Existing System Proposed System Knowledge Integration Use Cases
3	Analysis	 Exploring Possibilities Feasibility Analysis Cost Benefit Analysis Flowchart/ DFD/ER/UML diagram(any other project diagram
4	Methodology	 Criteria & constraints (Process models) Tools used Procedure
5	Design And Developing A Prototype	 Module design and organization Data Design user interface design Model or Prototype
6	Project Execution Plan	Plan using Project Management Tools
7	Testing & Validation	Test cases and Report (based on manual & automation testing)
8	User Manual	 Explanation of Key functions Method of Implementation Forms Output Screens
9	Conclusion	Project Conclusion & Future enhancement

• Rubrics guidelines to be followed during project evaluation.

• **REFERENCES** should be written as

1. Author Name, Title of Paper/ Book, Publisher's Name, Year of publication 2. Full URL Address

Parameters for Evaluation:

- The mini project is evaluated for 50 marks.
- Term work should be based on 2 presentations of ten marks each and five marks for documentation.
- Oral (25 marks) should be based on final demonstration and presentation.

** Mini Project will be performed by students during summer vacation of Even Semester of second year (SEM IV). Mini project will be evaluated in SEM V. Evaluation of the mini project will be internal 25 marks as TW and 25 marks as oral examination conducted by External Examiner.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOPR601.1	Achieve hands on experience in an organization							
CEOPR601.2	Relate classroom and textbook learning to the real world.							
CEOPR601.3	Learn the professional skills and interpersonal relationship in professional environment							

Course Outcomes (CO): At the end of the course, the students will be able to

MCAPR601.1	Attain an exposure to real life organizational and environmental situations
MCAPR601.2	Attain technical skills as per the requirements of the domain
MCAPR601.3	Adapt professional and interpersonal ethics.
MCAPR601.4	Articulate SDLC phases in developing software project and in writing the
	project document.

The guidelines regarding preparation of Internship-Project report for MCA SEM-VI

- To take hands-on experience of the real world, every candidate is required to undertake a project of 6 months duration in an organization of repute and must submit their project documentation.
- Each student should submit different documentation in a specified format illustrating his/her role/contribution in the project and write the documentation from his/her perspective.
- One copy should be submitted for University records which will be retained by the college and another one is student copy.
- Each student must submit one CD having the documentation part in PDF file format only.
- Hard copy of the project report must be submitted before a week of finalpresentation.
- Students have to present their project individually.

- Feedback form from the Industry should be submitted separately in sealed envelope to the internal guide.
- Students must ensure the originality of the work with ethics.

Assessment:

Internal:

Assessment consists of two presentations of 25 marks each. The final marks should be the sum of the two presentations.

Rubrics has to be followed during project evaluation.

Subject C		Subject Name						Credits				
MCA602			Research Paper						01			
Subject	Subio	ot Nama	Too	ohina	Sahama		Croc	lits Ass	ianad	1

MCA602	MCA602 Research		Internal Assessment									
	Paper Test1 Test2(T Average of S		Semester									
		(T1)	2)	T1 & T2		Exam						
						5	0					50

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO602.1	Understand analytic approach towards choosing a research project and acquiring research skills	
CEO602.2	2.2 Access relevant data and present new ideas related to area of research.	
CEO602.3	Adhere to ethical standard of research.	

Course Outcomes(CO): At the end of the course, the students will be able to

MCA602.1	Write a research paper.			
MCA602.2	Present data coherently and effectively, outcome and counter-hypothesis			
MCA603.3	Attain experience in preparation of research materials for publication or			
	presentation.			

Seminar (50 Marks)-

- 1. Students must have in depth study in a specialized area by doing a survey of published technical literature and write a research paper in IEEE format (6-9 pages).
- 2. The research topic must be approved from the Institute. The institute should set up a committee to scrutinize the topics and finalize the same
- 3. The research paper may be written in a group of maximum 2 students.
- 4. The research paper must be published in national/ international conference or national/ international journal of repute.
- 5. The bifurcation of marks for the seminar will be as follows:
 - a. Original Contribution 10 marks
 - b. Paper Quality Published (5 marks)
 - Contents (5 marks)
 - c. Documentation (Language format) 10 Marks
 - d. Oral Presentation 10 Marks
 - e. Conclusion (Future Scope/ Recommendations/ Suggestions/ Findings)-10 marks
